About Us

A/C Diagnostics provides diagnostic kits for homocysteine and related analytes, vitamin B6 and cysteine. These tests run on a chemistry platform including automatic and portable analyzers. The tests are very simple and economical, involving a single enzyme. The B6 test is the only non-radioactive and non-HPLC test available.

About us

Access Bio, Inc. is a New Jersey based corporation formed in 2001 to develop, manufacture, and market in-vitro diagnostics tests worldwide. The Company utilizes advanced lateral flow technology for the production of point-of-care diagnostics to be sold to retail and the professional market. We have developed novel technologies for processing reagents and have produced these tests to meet FDA standards.

Access Bio plans to aggressively introduce other innovative rapid diagnostic products to the market. We focus on products which have significant market potential and high profit margin in the field of diagnostics (e.g., diabetes, cardiovascular disease, and neonatal diagnostics). A rapid gene chip product incorporating Peptide Nucleic Acid (PNA) technology, is being developed to detect specific genes or sequences associated with various disease indications. Proteomics technologies, which are not yet incorporated into any diagnostics products, are being used in our test development platform. There are currently no commercially available diagnostic products using proteomics technology. Our biochip line is presented as a rapid, one-step protein chip to detect multiple analytes and diagnose various diseases with a small volume of saliva, urine, serum, or whole blood. Assay results are converted to a digital signal off of the platform, which will enable quantitative results and communication of the test results between the point-of-test and medical experts through wireless or on-

About Us

Discover the Access Biologicals Advantage

Access Biologicals LLC is an industry leader in the collection and manufacturing of an extensive portfolio of biological products. Combined with closed-loop material sourcing, we are able to provide critical support for various markets such as in-vitro diagnostic man-

MEDICA - Weltforum der Medizin

ufacturing, biopharmaceutical, cell culture and diagnostic research & development. Viral testing and donor examinations are performed in accordance with current State, CLIA and FDA regulations allowing us to deliver consistently high quality human blood products. Manufacturing capabilities include a variety of plasma and serum processing in fully auditable facilities with on-site monitored storage. Our high throughput laboratory provides customer-driven responsiveness to specifications and product requirements. Our cell culture division offers a variety of human and animal sera products, and is the only company to directly collect and process Human AB serum at FDA licensed facilities located within the US.

Our Company History

Founded in 2006, Access Biologicals quickly established itself in the diagnostic and life science industries as a reliable and consistent source of high quality plasma and serum products. Subsequent acquisitions of strategic industry providers coupled with targeted expansion has allowed Access Biologicals to continue to anticipate and meet the needs of our customers. Starting in 2008, the company established manufacturing, analytical testing and cell culture divisions to further enrich the closed-loop response to our customers' needs.

Our Business Divisions

Access Biologicals LLC is comprised of business divisions that provide a comprehensive closed-loop response to our customers' product requirements.

Access Plasma – plasma donation center, which includes collection and donor recruitment
 Access Biologicals – processed plasma and serum manufacturing, sales and marketing
 Access Cell Culture – portfolio of quality human and animal sera.

Locations

Our headquarters, manufacturing facility and comprehensive donor recruitment office is located in Vista, CA. Sales offices are located in Dartmouth, MA, Atlanta, GA and Philadelphia, PA. Saturn Biomedical, our state-of-the-art plasma and blood collection center in Indianapolis, IN, is uniquely positioned as the largest and newest specialty donor center in the United States.

AccuVein Inc. - The Leader in Vein Illumination

AccuVein is a global leader in medical imaging solutions. Its AccuVein AV400, allows health care professionals to see a map of peripheral veins on the skin's surface with the goal of improving venipuncture and other vascular access procedures.

The AV400 is the world's only handheld, non-contact vein visualization solution. It is built on AccuVein's proprietary technology as embodied in its growing patent portfolio that covers a broad range of imaging and medical diagnostic technologies.

AccuVein and the AV400 have received numerous awards and widespread recognition from within the healthcare sector, including the top "gold" prize in the prestigious MDEA design competition as well as the 2014 Prism Award for Photonics Innovation.

AccuVein's industry leading and award winning AccuVein AV400 vein visualization solution is in use at more than 3,000 facilities worldwide. It is available for sale in over 120 countries. To see the AV400 in action and for a complete listing of countries selling AccuVein, visit www.accuvein.com.

About us

Acro Biotech supplies Rapid lateral flow tests, rapid drug tests, keyless™ split sample CupLab drug test cups, rapid Card-Lab/CardLab Dipcard drug tests, POC Paneldrug tests, and other products for urine, blood, and saliva screen testing. These products are all manufactured at our facility in California, USA. We OEM, custom label rapid test products to meet customer special needs. We have US FDA 510(k) approved rapid drug tests, cardiac marker tests ect. Our multiple drug test Panels are uniquely designed for convenience, high accuracy, as well as affordability in point of collection (POC) drug testing. High accuracy is another feature of our rapid test products that makes us stand out among rapid test suppliers. The sensitivity cutoff levels of our rapid test products are precisely set to required levels. Our highly accurate THC test, Ecstasy (MDMA) test, and Benzodiazepine test are a few examples.

Advanced Cooling Therapy - Esophageal Cooling Device

The Esophageal Cooling Device (ECD) by Advanced Cooling Therapy is a unique single patient use temperature modulation device. The ECD is simply attached

to commercially available chiller machines that are accessible in most hospitals. The ECD is a fully enclosed triple lumen system that is inserted into the esophagus as quickly as an oral gastric tube . Two lumens attach to the chiller machine, while the central independent third lumen is attached to the hospital's suction canister. The patient's temperature is regulated by the use of a Foley or rectal temperature probe that is connected to the chiller machine for servo control. The ECD eliminates infections caused by catheters or skin burns and frost bite caused by water blankets.

port and Emergency Medical Systems. These ventilators and CPAP devices are ideal for disaster preparedness and patient transport of critically ill patients. All products rely on pure pneumatic technology which eliminates the need for batteries and makes them completely MRI compatible. The internal CPAP system built into every product operates similar to an ICU ventilator to meet the inspiratory flow demands of any patient. The adult ventilators provide a choice of 100% or 65% oxygen delivery lets you significantly extend transport times. The new infant ventilator and adult hospital CPAP System provides the full range of oxygen from 21 to 100%. Our pNeuton Ventilators have been in clinical use since 1986. See the rugged versatility that makes pNeuton your most comprehensive choice in transport ventilation. Visit www.AironUSA.com.

About us

AIV, Inc., a privately-owned Maryland corporation founded in 1983, is conveniently located near the Baltimore Washington International airport, a major East Coast transportation hub. All AIV operation and administrative capabilities are housed in a company owned facility. We have recently doubled its size to 20,000 square feet.

The company originally repaired hospital dialysis machines and then, in 1993, began repairing medical equipment for the acute care hospital industry. Extensive repair experience gained over the years has allowed the company to reverse engineer, design, and manufacture new and replacement parts that meet the original equipment manufacturer's performance specifications.

AIV now focuses on supporting the hospital's Clinical Engineering department with engineered and manufactured replacement parts, accessories, and specialized repair services - all of which help lower the cost of maintaining patient care equipment. Its customers include over 2,000 domestic acute care hospitals, leading Independent Service Organizations, alternate site facilities, and international distributors.

AIV's major lines of business consist of medical device repair - including fetal monitoring transducers and I.V. pumps and the sale of related parts and accessories such as cables, power cords, AC adapters, and re-certified parts. The company's engineering team manages an active new product development pipeline to accommodate its customers' changing needs.

PRODUCTS: ELECTROMEDICAL EQUIPMENT, MEDICAL TECHNOLOGY (FETAL MONITOR TRANSDUCERS, NEW AND REPAIRS / INFUSION-SYRINGE PUMPS, REPAIRS, REPLACEMENT PARTS AND ACCESSORIES) AIV supports clinical engineering departments with replacement parts, accessories and specialized repair services. We seek business relationships with international distributors and repair companies or with companies who wish to market products or repair services to clinical engineers in the US.

About us

Akron Ohio, USA – Expedite Your US Market Entry:

Akron is a City of Continuous Innovation. Innovation has a long history in Akron. Since our founding in the early 1800s, the city has been at the forefront of creative enterprise. From developing some of America’s first commercial waterways to producing clay pipe for sanitation, from inventing synthetic rubber to leading polymer research, Akron has continuously built upon its strengths with ingenuity, passion and resourcefulness.

Today, the Akron region continues to innovate through such initiatives as the formation of the Akron Biomedical Corridor, its “International Technical Bridge” relations and its Akron Global Business Accelerator’s “Soft Landing” portal utilizing the city’s established expertise in biomaterials science, advanced materials

and nanotechnology with strong healthcare assets and cutting-edge technology. The Greater Akron has been exhibiting for decades at international trades shows to attract and assist early-stage SMEs entering the US market through its Akron’s “Soft Landing” portal thus supporting its designation of one of America’s Best Cities for Global Trade!

About us

ALFA Scientific Designs, Inc. develops and manufactures high quality rapid in-vitro diagnostic devices to serve the point-of-care marketplace including hospitals, physicians, criminal justice, and occupational health centers. We focus on rapid immunoassays including those for the detection of drugs of abuse, fertility hormones, infectious diseases, cardiac and cancer markers. ALFA is committed to satisfying customer’s needs by ensuring the highest level of performance of every device we manufacture.

In less than ten years since its founding in 1996, ALFA has developed over forty-six products most of which are FDA cleared and European CE marked. Moreover, we have twelve patent applications in the USA and in Europe; four of them have been published and eight are pending. Our manufacturing facility is located in beautiful sunny southern California, USA - just northeast of the city of San Diego. We are a California-licensed, cGMP compliant, ISO 13485 registered manufacturer of in-vitro diagnostic devices.

tems. Our vessels are innovative. Designed to react fast with tight temperature control to consistently deliver the results our users require. Allen Thermal can meet the customer's individual needs through design, programming and integration of the customer's specifications.

The distinctive mixing integrated within the vessel provides the utmost dependability with minimal aeration of the product. The unique mixer bearing design provides reliability with nominal maintenance without cross contamination unlike other types of bearing materials currently used in the industry.

Employing technology designs based on years of hands-on operation, our mixing vessels are proven to be safe, reliable, easy to operate and maintain.

Allen Thermal is licensed for the repair, maintenance or replacement of controls for steam equipment at your facility. We offer service agreements/contracts for ongoing maintenance of your existing equipment.

GRI-Alleset Healthcare

Founded in 2000, Global Resources International, Inc. (GRI) is a privately-held US corporation and a leading provider of comprehensive contract manufacturing services, medical devices, and protective solutions. From our metropolitan Atlanta headquarters and operations in five countries, we collaborate with our clients to develop and deliver value engineered solutions that enhance and optimize the client's capability to create a positive impact on their business proposition.

GRI has developed a highly successful model for managing a geographically diverse organization which allows us to maintain a flexible approach to how and where we do business. We are a leading contract manufacturer due to our no market boundary approach and commitment to continually expand our global presence and capabilities.

The mission of Alleset is to develop and deliver high-quality, cost-effective product solutions to health care providers and supply chain partners as a means to improving the value proposition across the global health care marketplace.

While Alleset, as a brand, is relatively new to the market, the management team has more than 90 years combined experience in the design, development, manufacturing and marketing of health care products. This experience is not only significant in time but also in diversity as it spans a wide variety of surgical products and systems, patient care devices, protective apparel and materials development in support of these product arenas.

With responsive and committed customer service teams, and warehousing on 3 continents, we are uniquely positioned to provide you with unparalleled support services.

Please visit our stand as we will be introducing several new products including our Allesorb™ family of high-performance underpads.

About us

American Diagnostic Corporation (ADC) was founded in 1984. In just over two decades, ADC has grown into one of the world's premier suppliers of diagnostic medical products, personal instruments, and accessories for the healthcare industry. ADC's corporate headquarters, located in Hauppauge, NY occupies a 35,000 square foot state-of-the-art office, quality control, manufacturing, and distribution facility. Sales offices in London, England, and Tokyo, Japan service our European and Pacific Rim distribution. Quality control and sourcing offices Taipei, Taiwan and Ningbo, China oversee ADC's Asian manufacturing facilities. ADC products are sold on 6 continents in over 30 countries and are in use by thousands of health care institutions and millions of health care professionals world wide.

ADC products are marketed under our many brands - among them, ADC, MEDICUT, ADSCOPE, PROSCOPE, E-SPHYG, DIAGNOSTIX, PROSPHYG, ADTEMP, MULTIKUF, ADLITE, POCKET PAL, RESPONDER, ADCUFF, SYSTEM 5, and ADFLOW just to name a few. ADC also manufactures products under OEM (original equipment manufacturer), and private label contracts for over a dozen of the world's leading manufacturers and distributors in the acute care, alternate site, nursing, extended care, student, and EMS markets. In fact, ADC is the largest private label supplier of stethoscopes and blood pressure instruments in the United States. Certified to ISO 13485: 2003, ISO 9001: 2000;

About us

AOTI is founded on a decade of experience in providing innovative solutions to resolve severe and chronic wounds. With a leading international management team, extensive worldwide infrastructure, innovative patented technology, and an extensive and growing portfolio of clinical evidence, the company is uniquely positioned to revolutionize the treatment of all advanced wound types.

Topical Wound Oxygen (two2™) Therapy

The application of positive pressure (sometimes referred to as hyperbaric, or above atmospheric pressure) oxygen to successfully treat and aid in the healing of advanced wounds has been studied extensively for decades, demonstrating undoubted clinical results. However, up until the availability of "Topical Extremity Chambers", much of this scientific evidence has been established utilizing large full body "Hyperbaric Chambers", where the patient is placed completely in a chamber, such as you might see used by deep sea divers suffering from the bends. Because of the sheer size and potential negative systemic affect of such "Full Body" chambers on the wound care patient population, the treatment has not been widely accepted or utilized.

AOTI has overcome these traditional limitations by developing a patented approach that allows for the application of Topical Wound Oxygen (two2™) utilizing unique cycled pressure directly to the specific wound site, thereby maximizing all the beneficial wound healing affects without any of the negative systemic side affects. Additionally, the company's products are small, easily transportable and available in reusable and single-use models, allowing for application of the treat-

MEDICA - Weltforum der Medizin
 COMPAMED - High tech solutions
 www.medica.de / www.compamed.de

ment at virtually any care site, from the hospital to the patient's home. These unique products now mean that any wound care patient at virtually any location can receive targeted therapy.

Armstrong Medical Industries, Inc.

Armstrong Medical Industries, Inc. supplies medical carts, CPR manikins, medical education manikins and equipment for emergency, anesthesia, hospitals, EMS, and education.

We have been selling the best in medical equipment since 1957. Back then, acronyms like CPR, EMS, and HMO would have been meaningless; explosive anesthetics were still in use; and the average hospital had a lot fewer departments than it does today. The past 50+ years have brought change to the medical community, but Armstrong Medical Industries, Inc. remains the same service-oriented company it started as four decades ago.

We have a national sales force to service our hospital accounts, and a friendly and knowledgeable customer service staff that can handle just about any question thrown their way. If you're looking for Medical Carts, Hospital, EMS, or CPR equipment, Armstrong Medical has the product you're looking for, and the reputation and service to back it up.

About us

Aspen Medical Products, Inc., is a leader in the design, development and marketing of upper and lower spinal orthotics. The Company is in Irvine, California and has local sales representatives throughout the United States as well as representation worldwide. For over twenty-five years, the management team and employees at Aspen have introduced a continuous flow of pioneering spinal bracing products and services to the healthcare marketplace.

Aspen Medical Products was formed on June 1, 2000, when International Healthcare Devices, the product development and marketing arm for Aspen Cervical Collars and CTOs, merged with Fiji Manufacturing. Fiji Manufacturing had been the exclusive manufacturing agent for all of International Healthcare Devices' products.

From 1993 through the merger with Fiji Manufacturing, International Healthcare Devices designed, developed and sold Aspen Cervical Collars both domestically and internationally. From its inception, International Healthcare Devices was a profitable and fast growing company. By 1995, IHD was well on its way to developing a successful marketing strategy that incorporated the Aspen Collar's effectiveness in upper spine motion restriction while virtually eliminating complications from skin breakdown. The dramatic impact of the Aspen Cervi-

MEDICA - Weltforum der Medizin
 COMPAMED - High tech solutions

cal Collar on patient care is well documented in a variety of leading healthcare publications. In addition, the Collar has been part of a variety of groundbreaking scientific studies that have proven the device's motion restriction characteristics for better patient outcomes.

From 1999 to the present, Aspen Medical Products has expanded into lower spine as well as cervical spine, bringing over a dozen products to market.

Axelgaard Manufacturing Co., Ltd.

Axelgaard Manufacturing Co. Ltd is a vertically integrated manufacturer of Hydrogels, Neurostimulation Electrodes, Sensing Electrodes, Transdermal Drug Delivery Electrodes, and Surgical Grounding Pads. In addition, our hydrogels provide the optimum performance available for mobile health and mobile fitness device to skin interfaces.

Since being founded in 1985, Axelgaard Manufacturing Co. Ltd. has specialized in innovative products that are globally recognized as being the best in technical design and quality performance. We receive this recognition because of our dedication to quality backed up by complete in-house technical engineering support, as well as advanced converting and design capabilities. Further recognition of our forward thinking and creative problem solving comes with having been awarded 48 U.S. patents most with corresponding foreign patents. These intellectual properties cover Hydrogels and finished devices for multiple medical and non-medical applications.

Our many OEM partners rely on us to be an integral part of their design team utilizing our extensive experience in our own product development successes and our understanding of how to turn market requirements into products.

We are currently working with companies around the globe, assisting with their skin interface requirements for Mobile Health and Mobile Fitness devices. We specialize in custom Hydrogel formulations to match the design goals of the customer, and because of our capabilities in every area of development and manufacturing, we receive many requests to provide a turnkey product.

Axelgaard Manufacturing offers custom labeled products in addition to the various well known company brand names including: PALS®, StimTrode™, Val-uTrode® and UltraStim® Neurostimulation Electrodes, Ionto480® Transdermal Drug Delivery Electrodes, Little PALS® Sensing Electrodes, MultiStick® Hydrogel and DermaFlow® Hydrogel.

Company Profile

We are the leading independent medical gas fittings, connections, adaptors, and hose manufacturer for Respiratory, Anesthesia, Dental, Emergency Care, Surgical, Home Care, and Cardiopulmonary equipment.

Our American-made fittings product line includes DISS, Ohmeda (Diamond), Chemetron (NCG), Schrader, Puritan, British (BOC), European (NIST), French (Afnor), German (DIN) and Australian (SIS). In addition, we produce hose assemblies, which can be CE-marked, for the US and International markets.

Bay Corporation was founded in 1979. Our business is located in the city of Westlake, a suburb of Cleveland, Ohio USA. The company grew out of a need in the medical industry for a reliable source of quality fittings and connections. A small, privately-held company, Bay Corporation is committed to serving our customers' needs as we strive to provide a great place to work for our employees. We are dedicated to operating our business in both a professional and ethical manner.

Today, in addition to our excellent quality, we are also known for our quick, off-the-shelf delivery of in-stock products, our broad product line, and friendly customer care. Our 33,000 square foot manufacturing facility is designed to meet the growing needs of our many fine customers.

We are CE 0344, ISO 9001, ISO 13485 certified.

Company Information

Bio Compression Systems, Inc., has been the leading manufacturer of compression therapy equipment for over 30 years.

We manufacture Sequential Circulators and Gradient Sequential Pneumatic Compression Devices for the treatment of Lymphedema, Venous and Arterial Insufficiency and Wound Healing which includes a wide range of garments in sizes and styles applicable to virtually every anatomical area in need of edema reduction, increased circulation and promotion of enhanced wound healing.

Bio Compression is the only manufacturer to offer custom garments of various

MEDICA - Weltforum der Medizin
 COMPAMED - High tech solutions
 www.medica.de / www.compamed.de

length and widths that can be designed and delivered within a period of only two weeks. All such garments are totally compatible with our Model 2004, 2004-FC, 3004, 3004-FC, 2008 and 3008 gradient sequential pumps.

BioCryo is a unique system that utilizes both our Model 2004 and 3004 pumps, enabling simultaneous application of cold therapy and sequential gradient compression for the rehabilitation of patients suffering from sports and other orthopedic injuries, as well as to relieve postoperative edema and enhance rehabilitation.

Multi-Flo Combo System, provides DVT prophylaxis. Postsurgical patients will benefit from the DVT Prophylaxis System while reducing swelling in their surgical area. Based on the patient's needs, standard Cryo garments are available for the foot/ankle, knee and shoulder.

Bio Arterial Plus is an Intermittent, Pneumatic High Pressure, Rapid Inflation/Deflation Cycle Compression System that sequentially compresses both the foot and calf in patients suffering primarily from Peripheral Arterial Disease (PAD). This system is designed to delivery pressures of 120mmHg for two to three treatments per day. The Bio Arterial Plus System increases arterial blood flow in both the popliteal artery and at the tissue level. The Bio Arterial garments are available in two sizes either standard or wide. Through affective compression, patients will see significant improvements in walking distance, oxygen levels and quality of life.

Turbine Transport Ventilator Company

Bio-Med Devices designs, manufactures, and markets a complete line of hospital transport ventilators and air/oxygen blenders. The Crossvent transport ventilators are a proven name for reliability and durability since 1994. The NEW TV-100 with built in turbine provides modes and performance of ICU ventilator in a compact design that is ideal for transport.

The TV-100 transport ventilator is designed for use from neonates through adults for all inter and intra hospital transports including in flight. The TV-100 weighs 6.2 KG at 7 hour battery operation with two batteries that are hot swap capable.

The TV-100 covers all patient sizes from 350 grams to 500kg. The TV-100 is the most full featured neonatal transport ventilator in its price range. FEATURES INCLUDE: SIMV with pressure support, measurement of exhaled tidal volume at the airway with a <1 cc deadspace fixed orifice differential pneumotach. Wave forms and flow loops and more.

About us

BioAssay Works™ provides unique gold sol nanoparticles, rapid assay development services and custom gold conjugation services. BioAssay Works™ provides proprietary innovative concentrated colloidal gold particles, custom conjugation technology, assay development services and a patent pending lateral flow rapid assay platform, C-FLAT for ultra-sensitive rapid assays. The Naked Gold™ gold sols are produced from 15 to 50 OD for ligand conjugation or other nanoparticle application. The unique proprietary process avoids the routine boiling and centrifugation process to produce uniform monomer particles optimized for rapid assays.

Changing the way people heal & stop pain.

What we do:

BioElectronics Corporation, headquartered in Frederick, Maryland, USA, is an award winning developer and manufacturer of innovative consumer medical devices that are designed to treat both acute and chronic pain using pulsed electromagnetic diathermy. This therapy is clinically proven, effective, safe and has been used for decades by physicians and physiotherapists. Advances in microelectronics have made it possible to deliver clinically proven and superior extended duration therapy in a small, convenient and economical medical device for personal extended use making it very cost beneficial. This has involved miniaturizing the existing technology into small, lightweight wearable medical devices that can be used up to twenty four hours a day. Our products cover a wide range of markets including the ActiPatch® for Musculoskeletal Pain, Allay™ for Menstrual Pain, RecoveryRx™ for Chronic Wounds and Postoperative Recovery and HealFast® for cats, dogs and horses.

Pain is a significant health issue negatively impacting quality of life. Today, pain is still inadequately treated, and many options, which are mostly based on pharmacological agents, have limited efficacy and can cause dangerous adverse side effects. BioElectronics vision is to provide a safe alternative to traditional therapies with a highly effective and safe solution to pain. We received the "2009

MEDICA - Weltforum der Medizin
 COMPAMED - High tech solutions
www.medica.de / www.compamed.de

Wall Street Journal Technology Innovation Awards" and in 2013 the ActiPatch® Musculoskeletal Pain Therapy was a runner up in "Most Innovative New OTC Product" award from the OTC Bulletin, a leading UK-based Healthcare Marketing Publication.

We currently distribute and market our innovative medical devices to many countries around the world. We hope to introduce our technology to new markets and additional countries in the near future. We look forward to serving you!

What we offer:

Breakthrough topical pain relief medical device products that are clinically proven, patented and doctor recommended.

The ActiPatch® (www.actipatch.com), Allay® (www.allaystore.com) and RecoveryRx® (www.recoveryrx.co) product lines are changing the way people heal around the world.

Top quality products accompanied by international certificates (CE and NEMKO certification).

Top quality marketing support including training of sales representatives.

What Makes Our Products So Great?

- 5x better pain relief and 100% safer than drug therapy

- Innovative award-winning technology that solves the source of pain instead of masking the pain

- Wall Street Journal "Medical Innovation Award" and the OTC Bulletin "Most Innovative New OTC Product" runner up award.

- Comprehensive clinical support

MEDICA - Weltforum der Medizin
 COMPAMED - High tech solutions
www.medica.de / www.compamed.de

- Unique Bio-Dynamic dual mechanism of action that includes both heat and electric stimulation
- Very significant cost/benefit
- Strong intellectual property – patents protecting both the product design and the pulse signature
- High reorder rate and numerous positive testimonials
- A 3-year pipeline of new products High margin items with relatively quick turnover

Experience You Can Trust

Bioresource Technology aims to supply your organization with the highest quality and best value IVD products on the market. In addition to our quality, lot-to-lot consistency, and ability to customize products, it is our willingness to invest valuable R&D time to meet customers needs that sets BRT apart from the competition.

BRT manufactures its products in a state of the art, ISO 13485:2003 certified, 26,000 square foot facility in Weston, FL, located between Ft. Lauderdale and Miami. All manufacturing takes place in a clean room environment. Our facility supports large-scale production in compliance with GMP standards.

Our staff of knowledgeable scientists, QC personnel, production technicians, and supporting administrators ensure that every order is completed in specification and on time. The BRT management team has an average of 26 years in

accessories with a range of “state of the art” models: the Aaron 940™, the Aaron 950™, the Aaron 1250™, the Aaron 2250™, and the Aaron 3250™ along with the IDS-200™, IDS-300™ and new JPlasma technology. This full line is the most complete offering of any USA manufactured electro-surgical generator product. The feature-packed generators are designed from the ground up to be extremely reliable, and are UL and Canadian Standards compliant. All of these generators are available for private labeling.

Over the past decade, Bovie expanded its manufacturing capabilities to include a full line of disposable electro-surgical electrodes in blade, ball, needle, loop and laparoscopic form. The reusable ES pencils, with a full complement of reusable electrodes and bipolar forceps, enhance our ever-expanding line of products.

In addition to electro-surgery, Bovie Medical is the number-one producer of battery-operated cauteries in the world. The company also manufactures a line of replaceable battery and tip cauteries, known as Change-A-Tip™. Bovie manufactures a variety of specialty products, such as nerve locators, lighted stylets, and corneal rust ring removers, the bulk of which follow the battery operated, tubular manufacturing process.

Bovie Medical Corporation is also actively engaged in the business of design development and manufacturing of OEM RF energy based devices and accessories. Capabilities include stainless steel, tungsten and coated specialty electrodes, J-Plasma technology and other innovative technologies. Bovie employs a highly-skilled team of R&D experts to turn concepts into innovations.

For over a quarter century, Bovie Medical has continued to improve and expand its product offerings and services, as well as its excellent record of support to existing customers.

About us

Breg provides premium, high-value sports medicine products and services that advance orthopedic patient care. From pioneering cold therapy products and innovative bracing to caring customer service and award-winning orthopedic practice solutions, Breg delivers a 360° customer experience unmatched in the industry.

Founded in 1989, Breg offers cold therapy, knee, shoulder, spine, elbow/wrist, foot/ankle bracing and orthopedic practice solutions. The Company's products are sold through more than 100 distributors in 36 countries. Breg is based in Carlsbad, CA, with approximately 500 employees in the U.S. and Mexico.

For two decades, Breg has transformed orthopedic care with industry-leading products. Breg is the leader in motorized cold therapy, selling over two million Polar Care® units. In 2005, Breg launched the Fusion® family of functional knee braces, combining sleek, lightweight design with exceptional comfort and fit. Introduced in 2010 on select Fusion braces, AirTech™ is an innovative system of AirMesh® and pad channels that move heat and moisture away from the skin.

Introduced in 2011, Breg's LPR™ Ligament Knee Brace provides rigid sup-

About us

Established in 1994, Cell Marque Corporation primarily focuses on producing and marketing antibodies for diagnostic immunohistochemistry (IHC). Our main focus is providing quality and innovative antibodies for in vitro diagnostic use to further serve the clinical market. Cell Marque serves pathology laboratories and research facilities globally through a domestic sales force, our team of Technical Consultants, as well as international distributors. We are a company that encourages intellectual growth and it is our goal to stay on top of current issues in our industry so that we can bring our customers the newest and most innovative antibodies available. In addition, Cell Marque manufactures and supplies primary antibodies to Ventana Medical Systems® (a member of The Roche Group) who is the world leader in automated IHC platforms. Lastly, we are one of the only IHC companies that employs a team of medical doctors, including two full-time pathologists, to deliver to our customers the level of quality and support they deserve.

Cell Marque operates out of a consolidated facility in Rocklin, California. The facility incorporates laboratories for hybridoma-derived antibody production, research and development, histology, and quality control as well as production floor space. Cell Marque is both ISO13485:2003 certified and 21 CFR Part 820 compliant and therefore offers our products to key markets worldwide. We have also taken an initiative to enhance our productivity through studied improvements in workflow (LEAN Enterprise) and the adoption of paperless document

We Enable Ultrasound

A technology-innovation leader with a game-changing embedded-ultrasound platform, Cephasonics provides a complete range of cQuest™- based technology, semiconductor and subsystem products that increase the performance, lower the power and accelerate time-to-market of ultrasound devices. The company's cQuest Ultrasound API™ software is the catalyst for customer innovations that are spurring a revolution in ultrasound from image-guided procedures to ultrasound as an appliance. Launched with a management buyout in 2012 and headquartered in Santa Clara, Calif., the company's technology and semiconductor products, including its AutoFocus™ beamforming technology and its SAM1600 family of ADCs, have won multiple industry awards for innovation. Additional information about Cephasonics can be found at www.cephasonics.com

The Company

Chematics is a privately held biotechnology company engaged in the development and manufacture of novel in-vitro diagnostic testing solutions and products that facilitate early identification of abnormal or unhealthy conditions. Founded in 1988, Chematics is located in North Webster Indiana. Our objective as a company is to provide our customers worldwide with innovative easy to use products, at a reasonable price that are of the highest quality and are safe and effective when used for the purposes for which they are intended. Our success as a business depends upon achievement of this objective and upon continuous improvement of our products, processes and customer experiences.

About Chembio

Chembio, founded in 1985, develops, manufactures, licenses, and markets point-of-care (POC) diagnostic tests and technology for the detection of infectious diseases and other medical conditions. Chembio manufactures three FDA-approved HIV 1/2 tests and three CE-approved tests. Chembio's FDA and CE-approved DPP® HIV 1/2 Assay works on oral fluid or any blood matrix and is the newest addition to the line of Next Generation DPP (TM) Technology Dual Path Platform products. It detects the presence of HIV 6 days earlier than the current oral fluid rapid test. DPP® technology enables multiplexing and improved sensitivity. Chembio's FDA and CE-approved HIV 1/2 STAT-PAK® and CE-approved STAT-VIEW® HIV 1/2 Assays for blood are widely used in rapid HIV testing. DPP® HIV-Syphilis, a dual test that uses one patient sample, is available in select countries as is HIV 1/2 STAT-PAK® DIPSTICK, priced for resource-limited markets. Chembio participates in the global HIV rapid testing market with strategic channel partners worldwide. All of our products are manufactured in the U.S.

Who we are

The parent of three separate divisions, Cincinnati Sub-Zero (CSZ) is a team of service-minded professionals and a leading manufacturer and provider of products for medical and industrial needs.

The difference with CSZ - we put people first. That means that your questions and concerns are promptly addressed, orders are taken and processed in a timely and efficient manner and we are always looking to develop products that better suit your needs.

For the healthcare industry we provide more than just patient temperature management, temperature control and therapy products. We provide support, convenience and security.

Our environmental test chambers, whether purchased or located at our ESSC environmental testing laboratory, are state-of-the-art designs that carry out impeccably accurate testing procedures and provide results of the highest accuracy. Our service professionals have a superior level of expertise and training, and they are always working to service your exact needs.

About Cloud DX

Cloud DX Inc. is a leading competitor in the highly regulated digital healthcare market now estimated to grow to \$28B by 2018. We provide remote patient monitoring hardware and recurring revenue services in a frictionless, fully reimbursed transaction, coupled with a sales strategy that drives rapid adoption among US healthcare providers, resulting in expected revenue growth from \$1M today to \$36M/yr. The company is a fully FDA licensed, ISO 13485 certified medical device manufacturer and software developer with a strong technology pipeline. Our Pulsewave® remote monitoring suite reduces the hardware and setup costs for home monitoring by up to 80%, and offers future-proof cloud-to-cloud integration with electronic health record (EHR) systems.

CODONICS

American manufacturer of innovative medical devices for the past 30 years, Codonics is present in 125 countries with product solutions throughout the hospital:

Infection Control

- NEW! Mobile devices like Smartphones and tablets are contributing to the transmission of Hospital-Acquired Infections, while the patient's room has many high-touch surfaces highly susceptible to cross-contamination. Codonics Disinfection Technologies provide effective UVC solutions to quickly disinfect handheld devices and frequently touched surfaces to protect hospital staff and patients.

Operating Room

- Safe Label System helps significantly reduce medication errors and healthcare costs anywhere syringes are prepared. On demand, prints color, easy-to-read syringe labels that include drug name and concentration. Integration with leading manufacturers helps eliminate manual tasks in the OR while increasing safety. Also prints line labels to properly label tubing at both ends.

Diagnostic Imaging/Radiology

- Horizon Dry Imagers print on multiple sizes of film and color paper.
- Virtua Disc Publishers record DICOM exams and viewers, and print customized disc labels onto CD/DVDs
- Integrity Medical Disc Importers enable DICOM studies from outside CDs to be imported and reconciled into PACS

GAME READY® Company Overview

Game Ready® is the leader in active compression and cold therapy technology for injury treatment and post-operative recovery.

The company was founded in 1997 using NASA technology to create the first-ever sports medicine and post-op recovery device that simultaneously delivers active pneumatic compression and adjustable cold therapies.

Since then, Game Ready has become the injury treatment system of choice, both domestically and internationally, for thousands of prominent orthopedic surgeons and clinics, leading physical therapy centers, athletic trainers, and athletes and teams from virtually every professional sport – including the NFL, NBA, MLB, MLS, and NHL.

Game Ready strives to deliver safe, reliable, effective, and “best in class” rehabilitation products through intelligent processes, continuous improvement, and a focus on customer satisfaction. We aspire to be a better organization by having a “Whatever It Takes” attitude and making quality part of everything we do. We are Game Ready!

CoolSystems, Inc. (makers of Game Ready) is based in Concord, California,

MEDICA - Weltforum der Medizin

About us

Defibtech, LLC is a leading innovator in the field of Automated External Defibrillators (AEDs). The company designs and manufactures the award-winning, FDA-approved, Lifeline™ and

MEDICA - Weltforum der Medizin
 COMPAMED - High tech solutions
www.medica.de / www.compamed.de

ReviveR™ brands of defibrillators and related accessories. Our products are sold exclusively through a network of distribution partners in the United States and around the world. Defibtech, founded in 1999, is headquartered in Guilford, Connecticut, and manufactures all of its defibrillators in the USA in a state-of-the-art ISO-9002 certified facility.

The flagship AED is the new Lifeline VIEW, the FDA-cleared and CE-marked semi-automatic defibrillator, which is the first and only semi-automatic AED that shows you what to do in an emergency using full-color, full-motion video.

The Lifeline AUTO, a fully automatic defibrillator available for export that is designed to analyze heart rhythms and automatically deliver a shock—without intervention—if needed

Defibtech's founders (both graduates of Yale University) have a great deal of medical device design experience and have founded other high-tech companies. Defibtech was founded on the philosophy of putting together a truly exceptional team to relentlessly pursue one goal: creating and manufacturing the best AEDs in the world.

Our engineers have extensive medical device design experience and also, just as importantly, high-tech high-volume consumer product development experience. The members of our team have developed hospital equipment (e.g., arrhythmia detection algorithms, ultrasound imaging equipment, filmless x-ray systems, blood flow monitors, trans-telephonic defibrillators), implantable and invasive medical devices (e.g., heart valves, catheters), military technology (e.g., rocket ultrasound inspection systems), consumer products (e.g., high-end audio equipment, consumer phones), and commercial products (e.g., phone company central office electronics, ultra-high speed image processing systems

Defibtech's proximity to New Haven, CT, coupled with the company's strong Ivy League roots, gives us access to a great resource in Yale University. Defibtech continues to work with faculty from both the Engineering departments and the Yale School of Medicine to bring you the best defibrillator products anywhere

Defibtech is committed to continuing to provide exceptional real-world AED products at affordable prices. We believe our design, manufacturing, support, and sales teams are the best in the business. We are proud to let our products speak for themselves

About us

DJO is a leading global provider of high-quality, orthopaedic devices with a broad range of products used for rehabilitation, pain management and physical therapy. We also develop, manufacture and distribute a broad range of surgical reconstructive implant products. We are the largest non-surgical orthopaedic rehabilitation device company in the United States and among the largest globally, as measured by revenues. Many of our products have leading market positions.

We believe that our strong brand names, comprehensive range of products, focus on quality, innovation and customer service, extensive distribution network, and our strong relationships with orthopaedic and physical therapy professionals have contributed to our leading market position. We believe that we are one of only a few orthopaedic device companies that offer healthcare professionals and patients a diverse range of orthopaedic rehabilitation products addressing the complete spectrum of preventative, pre-operative, post-operative, clinical and home rehabilitation care. Our products are used by orthopaedic specialists, spine surgeons, primary care physicians, pain management specialists, phys-

MEDICA - Weltforum der Medizin

ical therapists, podiatrists, chiropractors, athletic trainers and other healthcare professionals to treat patients with musculoskeletal conditions resulting from degenerative diseases, deformities, traumatic events and sports-related injuries.

In addition, many of our non-surgical medical devices and related accessories are used by athletes and patients for injury prevention and at-home physical therapy treatment. Some of our trademarks, service marks and brand names include: Aircast®, Artromot®, CefarCompex®, Chattanooga®, CMF, Compex®, DJO Surgical, ,DonJoy®, Empi® and ProCare®.

DJO is proud of its reputation as both a leading edge innovator, and as an invaluable source of expertise and support to the clinician in the field. The company has a long history of commitment to clinical research and development both in-house and through collaborating with reputable clinical and biomechanical institutions around the world. At our Californian headquarters, we have a 'Biomechanics Lab' where we can rigorously test the efficacy of our products. This Lab was instrumental in the development of DonJoy's patented 'Four Points of Leverage' bracing methodology.

In 1993, DJO built its own Clinical Education & Research Facility (CERF) which was the first of its kind in the US. Virtually any open or arthroscopic orthopaedic surgical procedure can be recreated or performed in the lab, making CERF an invaluable educational tool and resource for all levels of practicing health care professionals. This facility is frequently used by orthopaedic surgeons from across the globe for surgical skills training and the development of new or innovative orthopaedic surgical techniques.

value to the marketplace with high quality equipment at reasonable prices.

DRE has been a leader in refurbishing used medical equipment for many years. About 10 years ago, DRE expanded to become a complete new and preowned medical equipment supplier. In 2000 we expanded into a new 18,000 square foot warehouse allowing us to keep up with demand and better service our customer base.

Today DRE offers complete new lines of Anesthesia Machines, Critical Care Monitors, Surgery Lighting, Electrosurgical Generators, Surgical Tables, Blanket Warmers, and more. With our professional refurbished products the combination allows DRE to provide clients worldwide with a one stop complete solution for their exam and operating room environments.

About Us

The Dymedix Difference

Dymedix Diagnostics Inc. sleep sensors provide peace of mind for sleep specialists and patients alike. Since 1998, we have focused on ADVANCING the SCIENCE of SLEEP by designing the most innovative diagnostic sleep sensors and electrodes for sleep studies. Our patented PDVF technology provides accurate, reliable and consistent PSG data with the least amount of patient disruption.

Dymedix Diagnostics offers neonate, pediatric, and adult sized clinical PSG sensors. Dymedix' patented PVDF Airflow Sensors measure changes in pressure and temperature simultaneously to accurately detect apneas and hypopneas with one sensor. Our PVDF reusable effort belts are accurate, reliable and have a 2 year warranty. NEW disposable PVDF effort belts are now available. Our sensors meet the AASM Scoring Manual specifications.

About Us

Dynex pioneered microplate technology 50 years ago, and continues to provide innovative ELISA technologies. Our industry-leading DSX® and DS2® ELISA systems are automation gold standards in clinical diagnostic labs worldwide. This year, Dynex showcases its newest breakthroughs, the Agility® system with SmartKit™ technology. This revolutionary open system utilizes state-of-the-art robotics, processing up to 12 microplates in a single run, delivering unparalleled precision while eliminating nearly all manual steps. SmartKit packaging is a simple, direct-load solution to assay setup and operation that reduces technician time and the potential for costly data entry errors, while improving ease-of-use and enhancing the product

MEDICA - Weltforum der Medizin
 COMPAMED - High tech solutions
www.medica.de / www.compamed.de

offerings of ELISA reagent kit manufacturers. At MEDICA, we will also highlight custom SmartKits available now and in the near future to make the most popular ELISA assays even more convenient to run on Agility. For more information on innovative solutions from Dynex, visit www.dynextechnologies.com.

Dynex products meet the rigorous demands of clinical laboratories. At MEDICA, in addition to our revolutionary Agility and industry leading DS2 and DSX systems, ask Dynex about upcoming innovations such as fully automated CLIA systems and our new M²® multiplex technology that will add greater efficiency and convenience to clinical testing and development. As the leader in microplate processing, Dynex developed this innovative technology to combine the proven chemistry of ELISA with the time and cost savings of multiplexing up to 10 or more analytes in each microwell. M² offers a reliable, sensitive and cost-effective platform for assay panels developed toward targeted clinical and companion diagnostic applications.

Dynex is also your only source for manufacturer certified consumables (tips, bottles and accessories) for your DS2, DSX and Agility systems, as well as factory trained service personnel. Contact us for affordable service and consumable options to ensure continued optimal performance of your quality Dynex systems.

About EastCoast Bio

Celebrating its 20th year in 2015, EastCoast Bio has been a manufacturer and supplier of high quality antigens, antibodies, exclusive SeaBlock and specialized immunoassay reagents for the diagnostic manufacturing industry worldwide. Large and small manufacturers all over the world use our raw materials to develop their own immunoassays. We continue to expand our product range of cardiac markers, drug of abuse (DOA), hormones, infectious diseases, serum proteins and tumor markers.

The Diagnostic Industry, Biotechnology and pharmaceutical companies, as well as researchers from universities, hospitals and biomedical research facilities, rely on EastCoast Bio for quick service, consistently dependable products, and knowledgeable support. We offer a wide selection of industry-proven, high-performance immunoassay products. Our well-stocked inventory and speedy customer service let us deliver the quantity of products you need as soon as possible — keeping your critical projects on track.

Led by a highly-qualified staff that understands the industry inside and out, EastCoast Bio only offers products that meet the toughest standards for quality. Our customers include major manufacturers that build widely-used, commercially-available kits with our components – because they know they can rely on our unwavering quality year after year.

Formed in 1995, EastCoast Bio is the industry's exclusive supplier of fish plasma-based blocking reagents, an increasingly popular substitute for bovine-derived proteins that does not cross react with mammalian-based antibodies.

Our Offices

The EastCoast Bio offices are located at the "Old Neal Farm" in North Berwick, Maine. In our 1850 vintage converted barn, we combine the best of modern biotechnology with a rich New England history. This historical landmark was originally built to house the oxen used by the state of Maine to build the "Old East Route" to Portland. The barn was then used for dairy cattle until 1978. Our own recently-updated (and thoroughly modern) animal facility is located minutes away from our main offices.

About us

Ecleris was founded in 2001 with the purpose of developing and distributing high quality medical equipments at a fair price for everyone.

We comprise the global market through a wide distributor net that commercializes our products in more than 70 countries.

With a sustained growth the company consolidated itself throughout time in an organization that designs, develops and commercializes equipments aimed at: microscopy, endoscopy and diagnosis equipment intended for ENT, gynecology, dermatology and aesthetic medicine, dentistry and minimally invasive surgery.

The design of our equipments is based on innovation, user friendliness, quality, aesthetic, durability, and cost-effectiveness. We always select the best quality components available in the world market, in response to our customer's most demanding needs.

Our post-sale service ensures a technical backup able to assist the customers at any time. We provide continuous professional training in the use of our equipments, treatments and possible applications. All this can be achieved thanks to an experienced management with a long track record in this industry, together with an exceptional working team.

Elliquence LLC

Welcome to elliquence... formerly ellman Innovations

Since Doctor Irving Ellman's breakthrough discovery of elliquence's (formerly Ellman Innovations) proprietary Radiowave technology (1969), the medical world has embraced the proprietary energy source for the precision it affords. elliquence celebrates its extraordinary lineage; a 50 year heritage of technological distinction and global presence in the fields of neurosurgery, endoscopic spine, orthopedic and pain management. Our vision has been to partner with the medical community and develop innovative, high quality, cost-effective products benefiting patients, doctors and medical facilities.

In recognition of Doctor Irving Ellman, we have incorporated his initials into our mission statement, offering "Innovative Excellence" to the medical community. Our mission is to improve the surgical intervention by way of 'healthy tissue preservation,' which results in less trauma, minimized scar tissue formation, reduced post-operative pain and an early return to a productive lifestyle. Our goal is to achieve our mission by working with the medical community and staying abreast of procedural advancements that can benefit from elliquence's technology.

Our expertise and focus on Radiowave solutions for neurosurgery, endoscopic spine, orthopedic and pain management are the key to what we believe is an extremely bright future for our company. We are committed to:

- Compliance with ISO 13485, the FDA Quality System Regulations, the Euro-

Endoscopy Development Company, LLC

EDC-Mission and Values:

Endoscopy Development Company, LLC (EDC) was formed in response to overwhelming, industry-wide demand for precision endoscopy replacement parts. Our central focus is to manufacture components for endoscopy and related disciplines.

We understand the demands of the modern marketplace! Demands such as reducing labor costs by eliminating the need for any dimensional modification to the part prior to installation. Demands such as eliminating the extremely high cost of losing customers due to inferior endoscopy replacement parts that cause inferior repairs.

We realize the extreme importance of customer relationships. As we build and maintain these relationships, we pledge to deliver precision endoscopy replacement parts and an extraordinary level of customer service with each and every transaction.

Endoscopy Replacement Parts, Inc.

Endoscopy Replacement Parts, Inc. is a full service, precision manufacturing facility. Since its inception in 1997, we have strived to bring you the highest quality aftermarket products for repairing rigid and flexible

endoscopes.

The history of ERPI goes back to 1979, when Joseph Bello founded Specialty Machining, Inc. SMI was, and still is, a world class precision contract manufacturer. It maintained many contracts in commercial applications, aerospace and military; having been the only facility in South Florida to be a certified manufacturer for companies such as Motorola and Gribetz.

In the early 1990s, then owner David Bello Sr. began to see a need for readily

available repair and replacement products in the third party endoscope repair industry. Because of this need, Endoscopy Replacement Parts, Inc. was formed in 1997, and managed to create nearly 500 products for its inventory by 2000.

Now, ERPI inventories over 1,100 products to repair brands such as Stryker, Storz, Pentax, Olympus, Fujinon, Linvatec, Dyonics, and many more. We serve a vast, worldwide market of independent service organizations, surgery centers and hospitals in over 50 countries. ERPI is proud to bring you its products at competitive prices, and made in our Florida based facilities.

ERPI is always open to visitors and is happy to host any of our customers at any time and for any reason. Just give us a call and schedule an appointment to visit or just drop by when you are in the area. We are located one hour and thirty minutes drive north of Orlando and south west of Jacksonville, and two hours drive north east of Tampa. All have major International Airports and Gainesville has a Regional Airport just fifteen minutes from our facility.

Thank you for choosing Endoscopy Replacement Parts, Inc. for all of your rigid and flexible scope repair needs.

The U.S. State of Florida has one of the largest and most sophisticated health care systems . With more than 703,000 employees , Florida is one of the most attractive locations for life sciences/medical companies in the nation. Florida's hospitals are among the best in the U.S. and specialize in treatment and clinical trials for diseases such as Alzheimer's, cancer, diabetes, heart disease , and much more.

The presence of nearly 2907 medical device, biotech and pharmaceutical companies and world-renowned research centers, such as Max Planck, Scripps Florida, Sanford-Burnham, Torrey Pines , Hussman Institute for Human Genomics and VGTI Florida, have firmly established Florida as a true life sciences hub.

Florida offers a cost-competitive environment, favorable overall tax structure and superior quality of life . In addition to providing an ideal business environment for entering the U.S. market, Florida provides companies strategic access to the emerging markets of Latin America . Florida offers a perfect environment to help life sciences companies thrive.

Essex Industries is a leading supplier to the Aerospace and Defense, First Response, Safety and Medical markets.

Founded in 1947 by Harold and Sidney Guller in their father's basement, the company has grown to four facilities, with over 180,000 square feet of manufacturing space and 370 employees.

The Gullers entered the Aerospace and Defense market with their first product, an F-214 Radio Noise Filter. Over the past sixty-seven years, the product range has grown to include Life Support Equipment, Ground Support Equipment, Platform Controls and Aircraft Components.

MEDICA - Weltforum der Medizin
 COMPAMED - High tech solutions
www.medica.de / www.compamed.de

As Essex expanded their offering to the Aerospace and Defense markets, they applied those technologies to other demanding, commercial industries and acquired companies to support the new market opportunities.

Essex Cryogenics launched in 1963, with designs and the capability to manufacture liquid oxygen (LOX) converters which provide a means of storing oxygen as a liquid and then expanding it into clean breathable oxygen as needed for the pilot and crew. This highly efficient method of oxygen storage and delivery, originally designed for Aerospace applications, has readily transferred to ground-based First Response and Medical applications.

The 1970's saw Essex establish a Medical group providing valves, flow selectors and regulators. And in 2001, The Respiratory Group was established to serve home healthcare and institutional care respiratory equipment providers.

Today, Essex Industries is proud to partner with the premier home healthcare and institutional care respiratory equipment providers. Through the years, our innovative engineering and dedicated customer service have established us as a leader that healthcare providers depend on and trust.

Product/Service

Excite Medical distributes the DRX9000™ Lumbar and Cervical Units. The DRX9000™ was created to assist health care providers in their effort to treat low (lumbar) back pain. The DRX9000™ provides a primary treatment modality for the management of pain and disability for patients suffering with

incapacitating low back pain and sciatica. The system was designed to apply spinal decompressive forces to compressive and degenerative injuries of the spine. It has been found to provide relief of pain and symptoms associated with herniated discs, bulging or protruding inter-vertebral discs, degenerative disc disease, posterior facet syndrome, and sciatica.

Offered since 2002, the machines have proven themselves time and again in national and international studies and in real world tests with chiropractors, neurosurgeons, and other physicians. It's simplicity in design make it easy to operate and very reliable. The DRX9000™ is recommended for hospitals, neurosurgeons, pain management clinics, osteopaths, as well as chiropractic clinics. Excite Medical offers the spinal decompression system with the highest integrity in all life sciences.

Currently in use in over 45 countries. Distribution opportunities available in many major countries.

About us

FareTec, Inc. is a Medical device manufacturer, founded in 1991. Our facility is located in Painesville OH, 20 miles East of Cleveland. We specialize in devices for pre-hospital care both in the civilian and military markets, domestically and abroad.

MEDICA - Weltforum der Medizin
 COMPAMED - High tech solutions
www.medica.de / www.compamed.de

For years, the company's primary focus has been on splints and various immobilization devices. The QD-4, Hare style leg traction splint, has been an industry standard along with our ladder splints and utility splints. FareTec, Inc. has evolved in the 21st century by introducing the CT-EMS/CT-6 leg traction splint, LifeBox50 and the FS-3 Utility splint. These items represent the latest in leg traction, immobilization and insulation technology. Please visit their product pages for more details.

In 2004 Responder Products was launched as a sister company to focus on export sales. It has been designed to function as a manufacturer's agent on specialty products to Europe, the Mid East and Austral-Asia countries. Learn more at the Responder Products website.

In 2009 FareTec, Inc. announced its latest line of products: the LifeBox50s. Rising requirements for Cold Therapy following cardiac arrest, along with increasing requirements for more stable drug and blood temperature controls, created a void in the market for a portable temperature controlled device. The LifeBox50 has been designed to solve these issues by combining a rugged transport container and state-of-the-art insulation panels.

FareTec, Inc. is committed to customer service and quality products. If you have any questions please call or email us at any time. A list of our Distributors and links to their websites are located on the site as well.

Surgical Mat, The Mini Mat, The Suctioner, The Smooth Mat, The Rx1 Mat, The Mini Mat, Safe Cord Floor Strip, The RX Office Mat, Dri-Safe Absorbent Pads & Fluid Disk (patented & patent pending).

FLAGSHIP SURGICAL prides itself on providing comfortable, safe and economical surgical and office Matting products engineered to ensure a more focused and comfortable surgical experience for surgeons, nurses and OR technicians. The Suctioner (patent pending), our newest product offering, is the only anti-microbial, disposable surgical mat of its kind incorporating powerful suction capability along with our unique anti-fatigue properties! Used in many major medical institutions, The Suctioner will help shorten room turnover times between surgeries and increase productivity, while also providing protection from cross-contamination with its anti-microbial aspect. Additionally, The Suctioner will reduce the need for laundry on the floor to absorb fluids, an often unnoticed and significant surgical expense in every OR. Our other Operating Room and Office safety products are also state-of-the-art and will provide significant benefits to all who use them. Please visit our web site, www.flagshipsurgical.com to learn more about our premium line of products!

About Focus Diagnostics, Inc.

A Leader in Diagnostic Testing

As part of the Quest Diagnostics family, Focus Diagnostics, Inc. is committed to providing proven and reliable products its customers have grown accustomed to throughout the years. Since its founding in 1978, Focus Diagnostics has grown its business from specialized laboratory testing to manufacturing its high-quality laboratory tests for hospitals and commercial laboratories worldwide. These manufactured tests are built in response to diagnostic testing trends identified and evaluated by Focus Diagnostics and used in Quest Diagnostics' national laboratories.

Our product lines include the Simplexa™ molecular chemistries, HerpeSelect®

MEDICA - Weltforum der Medizin
 COMPAMED - High tech solutions
www.medica.de / www.compamed.de

HSV serology, and a line DxSelect™ IFA and ELISA assays. As an organization we strive to be the first company to provide diagnostic solutions for emerging infectious diseases, with past accomplishments including assays for West Nile Virus, SARS, and Influenza A H1N1 (2009).

Our Partnership with 3M™

Focus Diagnostics entered into an exclusive global distribution agreement with 3M in 2009 to bring the Simplexa™ molecular chemistries and 3M™ Integrated Cyclor to the marketplace. These products were honored in 2011 with a Bronze-level Edison Award in the Science and Medical Diagnostic Aids category and received a Gold-level Medical Design Excellence Award (MDEA) in the In Vitro Diagnostics category.

Focus Diagnostics' Standard of Excellence

Today, Focus Diagnostics maintains its industry reputation as a market leader and is committed to providing products that accommodate your laboratory's needs through reliable products, quality manufacturing practices and flexible solutions.

Gaumard®

About Us

Gaumard Scientific traces its history to 1946 when its founder, a World War II trauma physician, recognized how polymers used in reconstructive and battlefield surgery could be used to create simulators for health care education. The first product was a synthetic human skeleton. In 1949, Gaumard introduced a childbirth simulator, designed at the request of the international health community, to improve the clinical competence of village midwives to reduce maternal and infant mortality and morbidity.

Over the past half century, Gaumard has dedicated its resources to the continued development of innovative teaching simulators in nursing care, emergency care and OB/GYN.

During the 1990's we introduced interactivity and computer integrated manikins for adult, pediatric and neonatal advanced life support. In 1999 we introduced five NOELLE™ simulators as part of a worldwide initiative to promote "safe motherhood". In 2004, Gaumard introduced the first of a family of "tetherless" simulators, which by 2007 included HAL®, NOELLE™, and the newborn and pediatric Hal® simulators. All five are controlled wirelessly, providing true "care in motion".

MEDICA - Weltforum der Medizin
 COMPAMED - High tech solutions
 www.medica.de / www.compamed.de

The philosophy of the founder was to provide innovative teaching simulators at an affordable price. We remain true to this philosophy today.

Introduction

Guangda Textile is a leading manufacturer and exporter of medical products. It covers 360,000 square feet and has 130,000-square-foot facilities including 61,000-square-foot sterile climate-controlled workshops. Guangda Textile also possesses a team of excellent managerial personnel and technicians while implementing advanced management methods and state-of-the-art computerized machinery.

As early as 1986, our products were certified by China Commodity Inspection Bureau (CCIB), and were honored with the title of "No. 1 quality manufacturer of medical products made in China" by top U.S. healthcare companies. Our company, with the free right of import and export, has been awarded the export of our products exempting from inspection, and has passed FDA inspection, ISO 9001:2000, ISO13485:2003, and CE. Our products have earned FDA 510(k) approval, and, under our continuous effort on quality and customer service, have

MEDICA - Weltforum der Medizin

About Genicon

GENICON, a private firm founded in 1998, is recognized as an emerging leader in the design, development, and distribution of a new generation of patented surgical instrumentation used for procedures in the field of Laparoscopy. These instruments are offered in both disposable and of limited life; designed to address the evolving needs of the Minimally Invasive Surgery (MIS) market. Laparoscopic surgery is used by General Surgeons, Gynecologists, Urologists, and Pediatric Surgeons; it is used for procedures such as gall bladder removal, gastric (stomach) banding, and infertility procedures that were historically accomplished through open surgical techniques.

The modern global healthcare system requires that new laparoscopic instruments not only deliver better patient outcomes, but that they do so for less money. Thus, GENICON continues to design and deliver unique and innovative products that meet the needs of surgeons and healthcare administrators to provide superior performance to the surgeon, a better outcome for the patient, and a lower cost to the healthcare provider. Our vision of harmonizing patient care with economic outcomes is paramount, as we truly recognize the impact on the lives of people that our products support in a global healthcare market. To that end, our goals continue to be met, and are proving to be very effective on a worldwide basis, both clinically and economically.

GENICONs operations are based in Orlando, Florida. GENICON currently man-

MEDICA - Weltforum der Medizin
 COMPAMED - High tech solutions
 www.medica.de / www.compamed.de

ufactures and sells several families of laparoscopic products to over 48 countries throughout the U.S. and Global markets. These products include a range of medical video products and laparoscopes; four award winning versions of trocars and cannulae, including bladeless, shielded, pyramidal, and blunt or open style; a complete range of mono-polar and bi-polar instrumentation; as well as lavage systems, ligation systems, and Veress needles. These surgical instruments, made in the United States, are FDA approved, as well as CE marked for the European Union.

GENICON is committed to working closely with surgeons and healthcare administrators to create products and education-training sessions that are innovative and technologically driven. As a result, GENICON remains poised to respond quickly with new ideas and products to effectively, efficiently, and economically support the changes that are, and will be, taking place in the coming years within the worldwide healthcare marketplace.

GENICON is vigorously emerging and evolving as a global leader within the laparoscopic surgical instrumentation field. Our success is based on the ingenuity and commitment of highly qualified employees worldwide, and their abilities to bring together research and development with production and distribution to provide the highest quality and reliability of both products and service.

GENICON has achieved the highest level of third party medical quality system registration through a European Notified Body, BSI, and recognized throughout the world.

About Gentell
 For 18 years, Gentell has led the wound care industry in new product development and innovative cost-containment (capitation) programs for hospitals, nursing homes and home health agencies. Quality, service, responsiveness and innovation are the foundation of our commitment to you.

Our singular goal is to help patients heal as quickly and naturally as possible. Gentell manufactures a complete line of wound management and skin protection products such as Hydrogel (in gel tubes, impregnated gauze pads or in gel tubes with Silver), Dermal Wound Cleansers, Dermatell Hydrocolloid Dressings, LoProfile Foam Dressings, Comfortell Specialty Absorptive Dressings and Bordered Gauzes. In addition, Gentell manufactures skin protection products such as Shield & Protect Moisture Barrier Cream, Shield & Protect Antifungal, SuperMax, Liquid Clean, Anti-Microbial Skin Cleanser and Ease Room Odor Eliminator.

Complete Product Line

In 2011, Gentell expanded into a new 35,000 square foot manufacturing plant in Bristol, PA. Virtually all Gentell wound care products are Medicare Part B approved, and include free consultations with Gentell Certified Wound Care Specialists. Gentell's Fastcare Wound Assessment Program speeds up treatments

Georgia, USA

The life sciences community in Georgia is a rich mix of medical device, Health IT, pharmaceutical, diagnostic and medical supply companies. With more than 300 life sciences companies in the state, including 150 medical device companies. Georgia is number one in Health IT among US states.

MEDICA - Weltforum der Medizin
COMPAMED - High tech solutions
www.medica.de / www.compamed.de

Georgia is also a leader in international trade with total exports of \$39.4 billion in 2014. With the support of 11 representatives abroad including Europe and the UK, exports of Georgia medical devices, medical equipment and pharmaceuticals exceeded \$1.3 billion last year.

In addition to these exports, Georgia is home to world-class assets for public health. The premier public health research institute in the world, the U.S. Centers for Disease Control and Prevention (CDC), is headquartered in Atlanta and employs more than 7,000 scientists. The headquarters of several world-renowned nonprofit organizations active in health are also in Georgia, including The American Cancer Society, The Carter Center, the Arthritis Foundation and the American Red Cross.

Georgia has cultivated an environment to help life science companies grow through unique public-private partnerships, innovative academic and university research and a highly skilled workforce. The Global Center for Medical Innovation (GCMi), one of Georgia's many assets, is an independent, not-for-profit, full service product development organization and the first and only one of its kind in the southeastern U.S.

Georgia products can reach markets anywhere in the world through its world class logistics network from Hartsfield-Jackson Atlanta International Airport to the deepwater ports of Brunswick and Savannah.

Find out why Georgia is on the pulse of life science.

ABOUT GULF FIBEROPTICS

Gulf Fiberoptics welcomes OEM and Distributor inquiries!! Gulf Fiberoptics is the premier, industry-leading manufacturer of standard and custom fiber optics. Our products are found world-wide in various markets including: Medical/Surgical, Photonics & Spectroscopy, Defense/Military, and Industrial/Scientific sensing. **OUR QUALITY AND SERVICE ARE SECOND TO NONE!**

Gulf Fiberoptics was founded in 1996 by Christopher Kerns and Patrick Bennetts with a vision of establishing the company as a leading edge, comprehensive manufacturer of fiber optic products. This vision and on-going philosophy is applied everyday with a mission to manufacture the HIGHEST QUALITY fiber optic components at a fair price, while providing the VERY BEST customer care. The foundation of the company was formed by its ability to manufacture premium quality borosilicate raw fiber. Our state-of-the-art, in-house draw towers allow us to achieve high levels of quality control. We offer custom material types and fiber sizes to better serve the industry. Gulf Fiberoptics' meticulous selection of ultra-pure raw materials is a competitive advantage for its fiber optic products. Gulf Fiberoptics holds current ISO 9001, ISO 13485 certifications, and U.S. FDA 510K product and facility registrations.

MEDICA - Weltforum der Medizin

About Us

We are proud to provide high-quality OB/GYN instruments and equipment to customers worldwide.

While exploring our website, you will notice that our prices are always clearly marked. This is a key part of our pricing philosophy – providing the same fair prices to all of our customers. This contrasts with some other businesses that have different prices for different customers.

We believe our single-price practice helps you and our other customers feel confident about getting the absolute best value for your money. Occasional exceptions involve quantity discounts for large orders.

Another key component of our pricing philosophy is to keep prices as affordable as possible. One of the ways we do this is by not having sales representatives. Instead, to help you learn about our products we give demonstrations at a variety of shows each year. Additionally, our customer service representatives are always happy to provide you with detailed product information.

Welcome to Hans Rudolph, Inc.

Hans Rudolph, inc. is a leading designer and manufacturer of respiratory valves and other respiratory products in the world today. Their innovative research and development is helping bring the field of Respiratory Healthcare into the twenty-first century.

In addition to their full catalog of products, Hans Rudolph, inc. offers custom

MEDICA - Weltforum der Medizin
 COMPAMED - High tech solutions
 www.medica.de / www.compamed.de

designs for Original Equipment Manufacturers(OEM) and Retail (end user) Customers.

During the early 1930s Hans Rudolph designed and built what were possibly the first Respiratory Valves specifically for use in Pulmonary Function Studies with humans and animals. In 1960 Hans and John Rudolph formed and incorporated Hans Rudolph, inc. as it continues to exist today.

About Our Products

Hans Rudolph, inc. has established itself as one of the world's leading designers and manufacturers of respiratory Valves since the 1930's. Our exceptional quality and dedicated service has continued through the years. Today, we specialize in respiratory products for Pulmonary Function Testing, Stress/Exercise Testing, Respiratory Care, Sports Medicine, Metabolic Measurements, Human Performance Laboratories, Physiological Human/Animal Research, Non-Invasive Ventilation (NIV), Obstructive Sleep Apnea Therapy (CPAP), and Flow Instrumentation & Lung Simulation. Our products range in size from mice to man and horse and include Pneumotachometers, Research Pneumotach Systems, Pneumotach Amplifiers, Breathing Simulator, New DLco Simulator, New Flow/Volume Simulator, Volume Calibration Syringes, Breathing Valves, Rudolph Face Masks (Oro-Breathing, Oro-Nasal CPAP & NIV & Nasal CPAP), Foam and Gel Optional Accessories for Masks, and Directional Control Valves (Stopcock-Type™, Sliding-Type™ and Inflatable Balloon-Type™). In addition to our standard line, we specialize in custom design and manufacturing for users and Original Equipment Manufacturers (OEM).

HemCon Medical Technologies was founded in 2001 and went through several transitions over the years but what always stood true is the high quality and dependability of the HemCon product line. The HemCon hemostatic and antibacterial product line enables medical professionals to provide improved care for their patients through a comprehensive product line that has applications in many disciplines throughout the continuum of care with the best positive outcomes.

HemCon Medical Technologies, Inc. is a subsidiary of publicly traded TriStar Wellness Solutions, Inc. HemCon is a medical device firm that brings advanced wound care technologies to the worldwide health care market. U.S. Headquarters is in Portland, Oregon with a wholly owned operating subsidiary in the Czech Republic. Our broad offering of products and technologies address underserved therapeutic healthcare opportunities within rapidly growing markets. The Company is a global leader in hemostasis and infection control in a range of professional medical (e.g., surgery, interventional cardiology, dental, dialysis, post-procedure recovery), trauma, military and consumer OTC (over the counter) applications. The Company's plans to continue its organic growth and new product/technology development in these areas with incremental offerings and will continue to utilize our key competencies to build increasing value for customers and stakeholders.

MEDICA - Weltforum der Medizin
 COMPAMED - High tech solutions
www.medica.de / www.compamed.de

As a fast paced growing global company HemCon needs to unify the image of the company and the product lines within one cohesive website. The company needs to be positioned as a solutions based professional entity that can stand up next to other major healthcare and wound care players and HemCon's website needs to provide product and corporate information to support new products, new applications and new users worldwide.

Who we are

HTI Diagnostics is the manufacturing division of High Technology, Inc. We are a USA manufacturer of IVD reagents and laboratory instruments.

Our focus is to offer turnkey solutions for clinical diagnostic laboratories, providing international medical organizations with the world's most effective and affordable medical equipment, reagents and consumables.

HTI Diagnostics brings to the market cost-effective IVD products to allow customers access to the latest technologies at the most affordable prices. The com-

pany has established innovative processes and intercontinental strategic relationships to enhance manufacturing efficiencies, allowing for competitive prices in established and emerging markets.

Established in Massachusetts since 1997, HTI's firm commitment to patient care, quality products and affordable prices enabled a continuous growth of its international business.

Today HTI Diagnostics has 3 international subsidiaries and is represented in over 22 countries across the world.

Become a Distributor

HTI continues to expand its presence worldwide; through both direct presence and a well-supported distribution network.

As an HTI distributor you will benefit from turnkey solutions for clinical laboratories worldwide. In addition to having access to reagents and equipment, you will also receive sales training, service certification, marketing and support tools and excellent after sales support.

It is important to consider the value of our brand, and realize that this value will be passed on to your customers, distinguishing your product from the competition. High quality made in USA products with full technical support and customer service; Manuals, Videos and Tech Tips available on-line; certification of your technical service team (here in the US or in your country); remote diagnostics capabilities to quickly resolve any reported problem with our instruments; scientists working full time on testing, developing and supporting our reagents and applications.

We are interested in a regional partner to work with us. We want to share ideas, strategies and help you increase your sales based on our successful experiences in other countries.

Welcome to Immco Diagnostics!

Immco Diagnostics incorporates innovative medical devices, diagnostic laboratory testing expertise and pioneering research for a comprehensive solution to autoimmune disease diagnostics.

Our company offers industry leading autoimmune disease diagnostics under the ImmuGlo™ (immunofluorescence assays), ImmuLisa™ (enzyme linked immunosorbent assays), and ImmuBlot™ (Western blot assays) brands.

Since 1971, autoimmunity has been our focus. Supported by extensive research and a proven track record of accuracy and reliability, our company has expanded from a specialized reference lab into an international organization offering high quality diagnostic products and services for the detection and diagnosis of autoimmune diseases to support improved patient care and prognosis.

Our Product division supplies leading in vitro diagnostic assays and reagents to laboratories worldwide. Immco Reference Laboratory offers biopsy, serology and other test services for diagnosis of autoimmune disorders and related immunological conditions. The Contract Research group supports clinical research trials for contract research organizations, pharmaceutical and biotechnology in-

dustries.

Immco researchers work closely with industry experts in development of proprietary products. This has led to innovations such as the first commercial assay for detection of endomysial antibodies associated with celiac disease and the first panel of autoimmune hearing loss diagnostics, including the hsp-70 antibody OtoBlot™.

We are continually expanding and updating our product offering. Come back and visit us often as we focus on our principal mission at Immco—providing the total solution in autoimmunity™.

About us

InBios International, Inc. is a medical diagnostic company that specializes in developing, manufacturing and marketing medical diagnostic tests for the detection of infectious diseases. Since its inception in 1996, InBios has developed proprietary technologies useful in the development of rapid and ELISA based immunodiagnostic assays. It has also licensed antigens from major corporations and research organizations from which a number of its assays have been developed.

InBios also engages in contract manufacturing and assay development for com-

panies who wish to outsource this part of their business. On a strictly confidential basis, the company manufactures products for clients in accordance with the Quality System Regulations of the FDA. Located near downtown Seattle, the facility includes a low humidity, environmentally controlled production room, state-of-the-art reel-to-reel reagent dispensing equipment, automated ELISA system, packaging and labeling equipment as well as separate research, tissue culture and quality control laboratories. InBios stands ready to assist clients in all aspects of product development from the feasibility phase to final product submission to the FDA.

The management at InBios International, Inc. believes firmly that the key to success is to offer very high quality products and services at competitive prices. Looking into the future, and building upon its proprietary technology, InBios will continue to develop new diagnostic tests for infectious diseases worldwide.

point of care testing. PLCD has developed and patented the Q-SENS technology that integrated waveguide optics, semiconductor chip manufacturing and solid-phase bio-sensing. The iNDx Technology iCORE software allows customers to generate, store and distribute medical information and also connect them to medical experts around the world for medical advices and experience sharing. iNDx LifeCare is focusing on developing novel commercial bio-sensing test systems based on these technologies to achieve its mission of providing actionable, accurate and affordable point of care testing for all patients in need.

Our Mission

is Actionable, Accurate, Affordable diagnostics (AAA).

Our Vision

is to be the global leader in providing connected point of care solution.

Our Unique Approach

is to combine our patented innovative technologies with a pioneering business model to offer point of care testing to provide the right medicine for the right patient at the right time.

Introduction

Basic Medical Industries, Inc., has the primary focus of providing factory direct vinyl and synthetic medical gloves with a strong focus on our own manufacturing of powder free vinyl examination gloves. With 17 years experience, we continue to grow by providing simple and valuable solutions for the medical industry. We are also committed to providing the medical, safety, first aid, dental and foodservice industries with other disposable products such as non-woven protective garments, face masks, hot/cold therapy products, and electrodes.

Basic Medical has factories owned by our parent company, INTCO, in China that manufactures high quality disposable vinyl gloves, hot/cold therapy items such as instant and reusable hot/cold packs, electrodes, non-woven protective garments, manual wheelchairs, and dispenser racks. In addition, a subsidiary company is also established in Shanghai, China that handles outsourcing projects, and assisting customers with new product development. As our management team is well known for their professionalism and knowledge of international operations, customs and FDA import requirements, and effective communication of market information, we are capable to provide cost-effective, value added services. We strive for prompt responses to any enquiries with the most competitive prices to our valued customers.

On our China side, we have well-organized facilities plus highly trained, English speaking employees to provide customers with the best quality of goods and services at fair market price. This, along with a commitment to finding solutions that help our customers succeed, such as product consolidation, outsourcing of items we do not manufacture, has been key to our continuous growth. We will do what we can to create the best win-win situation with each of our customers.

About Integrity Life Sciences

Integrity Life Sciences delivers an advanced solution to address one of the most costly systemic ailments in the world, chronic low back and neck pain. The ISCS 2.0 and Lombare Systems are non-surgical spinal decompression therapy systems engineered to provide pain relief for compressive and degenerative conditions of the spine. This technology provides pain relief associated with herniated disc, bulging disc, degenerative disc disease, posterior facet syndrome and sciatica.

Integrity Life Sciences demonstrates our commitment to our customers and partners through our quality products and by providing exemplary service. Integrity partners with the international community to bring our innovative products and services to the world. Commitment to excellence is what we promise; a promise that only Integrity Life Sciences can honor.

About us

For over 35 years INTERNATIONAL BIOMEDICAL has been designing and manufacturing solutions for infant and pediatric patients for leading hospitals and transport teams around the world. Our passion is developing revolutionary products and technologies that result in the best outcomes for critically ill infants and their families.

AIRBORNE are our infant and pediatric transport systems for in-house, ambulance and aircraft transport. These customized solutions begin with a selection of standard products that may be modified and combined to meet different transport environments.

INTERNATIONAL BIOMEDICAL has designed the Powder-Free Radiation Attenuating Glove to provide increased protection from direct x-ray beam and scattered radiation. These gloves are suitable for reducing harmful radiation exposure during any procedure requiring the use of fluoroscopy. At only .007in thick, the glove offers superior performance and dexterity over the thicker, conventional radiation attenuating surgical gloves. Lead-free, powder-free, and natural latex-free.

PPE's Personal Protection Equipment

Established in 2010, Ivan & Ivan offers different products for different market segments. For premium market segment we designed a premium product line, manufactured 100% in the USA. For price sensitive markets, we offer globally sourced Biosafety solutions packaged and sterile in the USA and/or Asia. Our PPE's (Personal Protection Equipment) kits are custom designed to meet clients needs and to protect health care workers from contamination from EBOLA. There are different levels of risk and different levels of protection. There is speculation on the possibility of the ebola virus being airborne or able to be transmitted via aerosols.

If a client needs protection against risk of transmission when there is contact with liquids, then you can choose a Type 4 PPE. It includes Type 4 components made with I-VEK, an SMS laminated with microporous film nonwoven, certified Type 4 coverall, scrub suit, isolation gown, apron, boot cover, N95 respirator mask, goggles, inner gloves and thick outer gloves.

If a client is looking for a level of protection that will protect against transmission of Ebola from contact with liquids and from aerosols, you can choose a CE certified Type 4 PPE with a CE certified PAPR (Powered Air Purifying Respirator). The Type 4 PPE, (PAPR sold separately) includes Type 4 components made with I-VEK, an SMS laminated with microporous film nonwoven, certified Type 4 coverall, hood, hose cover, scrub suit, boot cover, isolation gown, apron, inner gloves and thick outer gloves.

Ivan & Ivan LLC is a distributor of Scott Safety products, including the Proflow PAPR respirator.

About us

KEYSURGICAL

Key Surgical was founded in 1988 by three women who had extensive experience in the nursing profession and the surgical supply industry; they were motivated by the growing need for a single source supplier that could also provide excellent

MEDICA - Weltforum der Medizin
 COMPAMED - High tech solutions
www.medica.de / www.compamed.de

customer service. The partners built an extensive product line based on market need.

In 2005 Brian O'Connell and Scot Milchman acquired the company and have maintained the business in the original vein of responsively and conveniently providing the widest range of products and the highest level of service. In 2010, Ralph Herda joined the ownership group and today, Key Surgical offers more than 3,000 products to customers worldwide.

Committed to manufacturing and distributing the highest quality products, Key Surgical maintains the highest level of applicable ISO and FDA requirements. Continual dedication to personalized customer service and an extensive product line allow Key Surgical to serve the needs of hospitals, surgical centers and more throughout the U.S. and internationally.

KINEMATIC

Kinematic Automation is a vertically integrated provider of state-of-the-art manufacturing systems exclusively for the Medical and Diagnostics Industries. In-house capabilities include all aspects of machine design and development, fabrication, assembly, and testing. In addition, our dedicated and tenured staff is very adept

MEDICA - Weltforum der Medizin
 COMPAMED - High tech solutions
www.medica.de / www.compamed.de

at machine installation and startup and in the training of operators and maintenance personnel.

We build each system to exacting standards, utilizing the tenets of lean manufacturing. And since we are 100% focused on the Bio-Medical and Diagnostics industries, we understand how to apply GMP, GAMP 5, and 21CFR Part 11, and Part 821 requirements. We also know how to listen to input from our customers. Our success over the years can be attributed in part to our insistence on making our customers an integral part of our project team. After all, it is they who know their product and existing processes the best.

One thing that really sets Kinematic apart from other providers of automated equipment is our unique approach to machine serviceability. We design and build every system with the service and maintenance technician clearly in mind. We provide easy and quick access to internal components of each machine through the use of quick release latches and slide-out, or pivot-open modules (or other similar assemblies). This ease of access translates to shorter service and MTR (mean time to repair) cycles, ultimately resulting in greatly enhanced machine efficiency and up-time.

About Us

For more than 25 years, Kinesio Taping has been breaking new ground in the fields of sports performance, pain management and physical therapy.

The Kinesio Taping Method is designed to facilitate the body's natural healing process while allowing support and stability to muscles and joints without restricting the body's range of motion. It is used to successfully treat a variety of orthopedic, neuromuscular, neurological and medical conditions. Both Kinesio® Tex Tape and the training protocol have shown results that would have been unheard of using older methods and materials.

In the mid-1970s, Dr. Kenzo Kase was already a well-known Japanese practitioner licensed in chiropractic and acupuncture. He developed the tape, which has a texture and elasticity very close to living human skin, in response to limitations he encountered working with rigid sports taping methods on his own patients.

Dr. Kase was experienced with both Japanese and US norms for patient treatment. He began to have questions about the limitations of the Western medical mindset. He heard of a cryotherapy treatment for arthritis that utilized tape to adjust joint distortion. In Western medicine the presumption had been that once a joint is in a certain shape that cannot be changed. He was intrigued by the possibilities that this treatment could remediate the distortion.

He developed the tape, which has a texture and elasticity very close to living human tissue, in response to limitations he encountered working with rigid sports taping methods on his own patients.

To develop such a modality, he ordered supplies of the different athletic tapes that were available at that time. None of them gave him the results he was looking for. By trial and error, he realized that the source of the complaint was actually in the muscle, not in the joint or in the bone. To stabilize the joint he saw that it was more effective to tape around the muscle to achieve joint correction. The tapes that he was able to obtain were rigid, designed to immobilize the joint.

In cases of injury or overuse, the muscle loses its elasticity. Dr. Kase needed to develop a tape that would have the same elasticity as healthy human muscle.

MEDICA - Weltforum der Medizin
 COMPAMED - High tech solutions
www.medica.de / www.compamed.de

He knew from his practice that the tape would also need to stay on the skin where it was applied. He spent two years doing a lot of research relating to elasticity, adhesives and breathability.

Finally, he came up with a tape that possessed the proper degree of elasticity, and that lifts the skin microscopically. From that beginning, Kinesio® Tex Tape was invented. Its unique properties were based on a study of kinesiology.

Kinesio® Tex Tape is used to Re-educate the neuromuscular system Reduce pain Optimize performance Prevent injury Promote improved circulation and healing

Dr. Kase continues to work closely with Kinesio® distributors throughout the world as well as with Kinesio Taping® Association International (KTAI) and its members. Kinesio® USA and KTAI continue to maintain Dr. Kase's high standards of care and to track new and increasingly effective uses for the taping method.

About us

KOLLSUT®-USA, LLC Kollsut Sutures, I.V. Catheters and Safety I.V. Catheters are becoming more and more desirable and recognized for their quality and durability not only in Medical Institutions in the United States of America, but also in many countries around the world.

Kollsut Sutures were tested for strength of the thread and needle/suture bond strength. They were found to be comparable to other leading global brands by Medical Device Testing lab in the United States.

Surgeons around the world praise the cut and strength of the needles, versatilities of the threads and needle thread interface.

Kollsut Sutures are approved by major regulating organizations such as FDA - Food and Drug Administration and CE- European Community and manufactured under ISO (International Standardization Organization) standards.

This is the result of 15 years of study, labor and research of our scientists and technicians. Our personnel has been selected and trained very carefully. They have vast experience applying modern techniques in the surgery field, there-

About us

LiteCure, LLC is a manufacturer and distributor of highly integrated Bio-photonic Instruments, Diagnostic Devices, and Medical Lasers.

The Company has two divisions, a medical division, and a veterinary division. In 2007, LiteCure, LLC introduced the Companion Therapy Laser to the Veterinary market with the most advanced laser technology available.

USA Headquarters

The Company is located in Newark, Delaware and operates over 35,000 square feet of office space, manufacturing and custom laboratory facilities.

Management

LiteCure, LLC is managed by a team of employees with advanced academic degrees including PhD's in Chemistry and Physics. In addition, the Company employs a highly experienced team of research and development engineers that represent over 100 years of experience in the field of laser development and

MEDICA - Weltforum der Medizin
 COMPAMED - High tech solutions
 www.medica.de / www.compamed.de

systems integration.

Manufacturing

The Company uniquely offers Vertical Integration with over ten years of direct experience designing, developing and manufacturing various laser technologies and products on an OEM basis, and a direct basis. The Company also owns multi-million dollar manufacturing and testing equipment.

Regulatory Compliance

The Company is an FDA Registered Corporation and is currently in compliance with all FDA GMP requirements. An initial FDA 510K was granted in March 2007 providing marketing clearance of the LiteCure therapy lasers.

Superior Quality Control

Each laser goes through a rigorous testing procedure that is designed to meet or exceed all current Quality Control certifications:

ISO 9001: Design, Manufacture and Inspection of Medical Lasers
 ISO 13485: Design, Manufacture and Inspection of Medical Lasers

Lite Tech, Inc

Lite Tech, Inc. was founded in 1992, with the acquisition of the patented XENOLITE business and technology from DuPont.

Our products are developed from the longstanding DuPont technology and reputation of lightweight, eco-friendly, radiation protection innovation.

Headquartered near Philadelphia, Lite Tech is the only fully integrated x-ray protection manufacturer with an in-house R&D Lab, engineers, and ANSI representation on the IEC committee. Lite Tech produces its own proprietary core/sheet materials, which gives greater control over quality and standards compliance. XENOLITE products are backed by a thorough, vigorous testing process which meets the stringent world standard IEC 61331-1 (both 80 kV & 100 kV).

First in producing lightweight material, first in manufacturing a lead free option, and first with bi-layer technology, Lite Tech

has and continues to develop unrivalled leading-edge capability in the combined sciences of radiation physics and complex highly-filled plastics processing. XENOLITE was the world's first lightweight, multi-element, composite x-ray protection material designed to replace lead-vinyl while offering a significant

Lone Oak Medical Technologies

Lone Oak Medical Technologies, LLC. was founded for the purpose of building, promoting and servicing the accudxa2® bone density measuring device. The accudxa2® is a lightweight (11.8 kg); compact (0.03 m3): and easy-to-use bone mineral densitometer that scans a patient's middle finger (medial phalange) and reports results in minutes. The accudxa2® utilizes super-accurate Dual X-ray Absorptiometry (DXA), the gold standard in bone mineral densitometry. Unlike its larger and vastly more expensive cousin, the central DXA, the accudxa2® is highly affordable and non-invasive. Scan results are reported digitally on the device's touch screen and include BMD, BMC, T-score, and Z-score values (which are key factors in assessing a patient's overall fracture risk). Accudxa2® scan results can also be printed from the unit using commercially-available printers. Bone mineral den-

LumiQuick Diagnostics, located in the heart of Silicon Valley of California, develops and manufactures high-quality point of care and other immunoassay kits for the worldwide in vitro diagnostic market.

LumiQuick has R&D and manufacturing facilities in the US and China. The facilities are operated under ISO 13485:2003 and GMP guidelines. The combination of the technology and labor resources of US and China enables LumiQuick to develop, manufacture and supply high quality in vitro diagnostic products efficiently and cost effectively. Currently, we are offering product lines of rapid tests, ELISA, Latex tests, and raw materials. These product lines provide the immunoassays in various formats to detect cardiac markers, drugs of abuse, fertility hormones, infectious diseases and tumor markers.

LumiQuick's mission is to provide the affordable high quality products to help fighting diseases and illicit substance abuse.

About Us

Matrix Surgical USA is a privately owned American company dedicated to the design, production, marketing and distribution of biocompatible craniofacial implants under the OMNIPORE® brand. Matrix Surgical

USA offers its products to health care providers in the United States and through a global network of stocking distributors in more than 60 countries around the world.

Founded in 2011, Matrix Surgical USA was created with the following guiding principles in mind:

To design, develop, and introduce state-of-the-art products for ocular-facial surgery that exceed customer expectations and recognized industry standards for quality and performance, and the requirements of Regulatory bodies from around the world. To recognize that our products and services play an important role in the Health Care Practitioner's ability to diagnosis and treat acquired (traumatic) or congenital diseases; hence, we are mindful of our responsibility to educate HCP's in the proper selection and use of our products that help them achieve the best possible outcome for their patients. To foster a culture that incentivizes and rewards our associates for their dedication, hard work, ingenuity, passion, teamwork, honesty and integrity, and belief that what we do every day makes a difference in somebody's life somewhere in the world. To be good corporate citizens by actively serving the best interests of the communities where we live and work as well as providing support to humanitarian organizations engaged in delivering vital health care services around the world.

Management

About us

Mayo Medical Laboratories is a global reference laboratory that operates within Mayo Clinic's Department of Laboratory Medicine and Pathology and offers more than 3,000 tests across the full spectrum of health care subspecialties. Mayo Medical Laboratories works side by side with hospitals to ensure that physicians and providers have knowledge of, and access to, the latest testing and treatment guidance through our services and tools.

As a part of an integrated group practice, our services enable health care institutions to collaborate with 160 Mayo Clinic physicians and scientists and 3,000 laboratory professionals. Our services also apply patient-care-driven testing approaches, establish clinically proven test utilization strategies, and advance the integration of community health care delivery.

About Us

Med Gyn Products designs, engineers, manufactures and distributes medical devices for the women's healthcare industry, including disposables, high-quality instruments and equipment to OB/GYN professionals worldwide.

Our values have allowed us to continually grow for almost four decades as one of the leading suppliers of medical devices for women's healthcare.

Commitment to Innovation and to Quality

We continually evaluate our product line to drive innovation in women's health-care, and we work very closely with medical providers to understand new procedural techniques and new product development opportunities. As a result, we have received numerous awards and hold several patents for our products.

We are committed to product excellence and are a fully certified FDA, CE and ISO 13485 manufacturer and distributor.

Commitment to Patients and to Professionals

We are committed to patients and professionals by constantly evaluating proce-

dural techniques to identify products that are less invasive and more effective on women. Our focus is to improve the quality of life for patients by offering the best medical device technology.

Among our popular disposable products you find Endosampler™, Pipette IV™, CellSweep™, Aspiration Kit, Currettes, Collection Set, Laminaria, HSG Catheters, IUI Catheters and many others.

Our range of high-quality instruments includes many unique, hard-to-find instruments.

Med Gyn 's CryoTherapy System, our advanced Digital Video Colposcope and binocular colposcopes are just a few of the many products shown at Medica 2013.

Manufacturer of medical equipment

Established in 1978, Medical Illumination International has grown to become one of the world's premiere manufacturers of a wide range of medical equipment from a full array of surgery, exam and specialty light-

ing, surgery tables, equipment pendants and complete video integration.

Through both our "Medical Illumination" and "NUVO Surgical" divisions, we provide complete world-wide distribution through qualified medical equipment distributors.

Today, with major emphasis on "Green" technology, we are proud to be a leader in that important goal with reduced energy usage, improved efficiency and longer life products.

Most recently, we were pleased to release new lines of LED surgical and exam lighting, evidenced in our MI LED series and SYSTEM TWO LED surgery light series. Our NUVO division brings forth an all new line of major OR LED surgery lighting.

Please stop by our booth at MEDICA 2015 for a demonstration of our product lines. "Medical Illumination....Where Illumination Goes 'GREEN'!"

Medical Positioning Inc.

MPI (Medical Positioning, Inc.) manufactures and sells patented specialty beds and tables designed to improve diagnostic imaging in cardiology, radiology, mammography and interventional procedures.

Every product we offer comes with a story. Your story.

The story of a cardiologist who demands more precise imaging. The story of a sonographer who wants a table that is simpler to use and offers pain-free operation. All of the stories we hear from physicians, technicians and directors that inspire every innovation we build into our patented specialty beds and tables for diagnostic imaging.

Starting with our first major product, the still popular EchoBed developed nearly two decades ago, we work closely with the practitioners, physicians and technicians to create innovative new products that deliver exceptional results for both patients and staff.

Our products significantly improve the images obtained from ultrasound, echo and fluoroscopy equipment leading to better diagnoses and patient outcomes. But equally important, we do it in a way that minimizes pain and injuries to the staff, your staff, who uses our equipment everyday.

In other words we create patented products that don't require you to choose between delivering better results for your patients and more protection for staff. To date we have released over 100 models of diagnostic imaging tables and established an installed base of more than 5,500 units, many in America's leading medical centers. While that may seem like a lot of different products our reason for offering them is simple to give you exactly what you want and need without paying for unnecessary features.

MPI. Offering unique, ergonomically sensitive, patented diagnostic imaging tables that Position you for the best possible results.

Patient Monitoring & Recovery OEM & Stand Alone Solutions

Covidien and Medtronic have come together to create the world's premier medical technology and services company. This combination of two global health care leaders will accelerate the combined company's ability to create more meaningful innovations for health care providers and patients. Today's highly dynamic health care market demands that companies think differently and deliver solutions that bring value in the form of better patient outcomes, increased access to therapies and lower overall health care costs. Covidien brings Medtronic a broad portfolio of industry-leading surgical, respiratory & monitoring and vascular therapies solutions along with a comprehensive line of patient care products that will meaningfully advance Medtronic's mission to alleviate pain, restore health and extend life for more people, in more places, around the world.

Medtronic offers a comprehensive selection of patient monitoring solutions, with an option for virtually every patient and at every point in the care continuum. At Medica 2015, Medtronic will showcase the OEM Patient Monitoring Solutions and the Remote Patient Monitoring Solutions. Medtronic Patient Monitoring and Recovery OEM solutions include:

Nellcor™ Pulse Oximetry OEM Solution - Provides pulse oximetry across a wide range of patient needs, from neonates to adults; includes alarm management features and respiration rate – all from a single sensor.

Microstream™ Capnography OEM Solution – Microstream™ technology with

MEDICA - Weltforum der Medizin
 COMPAMED - High tech solutions
www.medica.de / www.compamed.de

Smart Capnography™ algorithms and a wide array of sampling line options, is designed for accuracy, ease-of-use and enhanced workflow solutions.

INVOS™ Cerebral/Somatic Oximetry OEM Solution – INVOS™ technology provides real-time, site-specific regional oxygen saturation and enables simultaneous 4-channel cerebral and somatic monitoring.

BIS™ Brain Monitoring Solution - BIS™ brain monitoring provides Level of Consciousness monitoring that may help optimize anesthesia.

Medtronic Health Informatics & Monitoring will be showing:

Vital Sync™ Virtual Patient Monitoring System – An EMR connectivity and remote continuous patient monitoring software solution that allows clinicians to remotely view patient information from multiple device categories on any web enabled device and send this information to the electronic medical records and Clinical Information Systems.

ZephyrLIFE™ Remote Patient Monitoring - Remote patient monitoring solutions designed to monitor multiple patients while delivering updates and event-driven physiological alerts to a central station for use by clinical care teams. The ZephyrLIFE system monitors patients throughout the care continuum — in the hospital, in transition, and at home.

MEGADYNE

MEGADYNE Medical Products

Since the founding of MEGADYNE Medical Products, Inc. in 1985, the company mission has been to provide the medical community with high quality, cost effective, innovative products benefiting surgeons, nurses, and hospitals. MEGADYNE products have proven their effectiveness in the operating room and have been the driving force behind MEGADYNE's emergence as an innovative leader in the medical products industry.

MEGADYNE's strong research and development team is committed to providing the healthcare community with products that will help practitioners meet the rapid changes occurring in the medical field. Surgeons, nurses and hospitals can continue to look to MEGADYNE Medical Products to help solve their medical problems, while controlling critical costs.

MEGADYNE Medical Products was incorporated in April of 1985 to facilitate the research and development of what is now known in the health care industry as the E-Z Clean cautery tip. Dr. G. Marsden Blanch, a noted ENT surgeon in Salt Lake City, Utah, wanted to eliminate the nuisance of eschar buildup on electrocautery blades.

About Us

Mercury Medical is a comprehensive health care company specializing in anesthesia, respiratory and critical care products and services and is recognized for its excellence in manufacturing high quality medical devices.

Mercury's core business encompasses Hospital Sales, Biomedical Clinical Services, Mercury Medical Manufactured Products (MMP), International, Medical Gas Certification, and Alternate Site Businesses (Home Care and ShurShip.)

Within the Hospital Sales division, Mercury Medical represents several highly technical life support manufacturers exclusively within a thirteen-state territory, including; Alabama, Arkansas, Florida, Georgia, Maryland, Mississippi, North Carolina, South Carolina, Oklahoma, Tennessee, Texas, Virginia and Washington, DC. It maintains a similar role with manufacturers of disposable and commodity products in the areas of anesthesia, respiratory and critical care.

Mercury Medical is headquartered in Clearwater, Florida with a regional depot in Atlanta, Georgia. These locations maintain a five-million dollar inventory of equipment and repair parts.

About us

Michigan Diagnostics – Biotechnology and Specialty Chemicals

Michigan Diagnostics is one of the world's leading manufacturers of diagnostic reagents and kits for research and clinical applications. We are committed to applying the highest quality and innovative solutions to service our clients' needs. As we have grown we have expanded our operations into multiple operations which are located across the world. Those operations include but are not limited to the manufacturing of Diagnostic and research reagents, Diagnostic kits, rapid tests, clinical labs, medical facilities and cancer research.

Company History and Global Scope

We were founded in 1998 by Dr. Brij P. Giri with a single product line of modified cyclodextrins. By the end of 1998, we had filed our first set of patents and had begun manufacturing our highly sensitive chemiluminescent reagents for diagnostic and clinical uses. In 2008 we expanded our production to include biochemistry kits, CLIA kits, and Rapid test kits. We also created strategic partnerships with local and international companies to help develop and manufacture our diagnostic kits. All of our products do have some type of regulatory

About Us

Microbiologics, originally named Environmental Protection Laboratories, was founded in 1971. Headquartered in St. Cloud, Minnesota, we provided laboratory testing services for detecting microbial contamination of water sources, the environment and food products. In 1976, the company began manufacturing microbiological diagnostic products including culture media and lyophilized microorganism preparations. Soon after, we began building a global distribution network that allowed us to expand from a small, regional manufacturer to a well-established global leader in providing the highest quality biomaterials for a safer, healthier world. Today, Microbiologics offers the largest and most diverse line of ready-to-use quality control microorganisms, which are sourced from the world's leading culture collections, packaged in convenient and valuable formats and expediently delivered throughout the world. We specialize in producing lyophilized QC microorganisms for use in the clinical, pharmaceutical, cosmetic, dietary supplement, food, water, environmental and educational industries. Each of our QC microorganism products is supported by the highest quality credentials in the industry, so when you buy from Microbiologics you know you're receiving the best products and unsurpassed service and support. About the company

MicroPoint Bioscience Inc (MBI) is a leading provider of microfluidic devices and systems for medical and biomedical applications. It is dedicated to the research, development, manufacturing, and marketing of the "Lab-On-Chip" products based on the MEMS (Micro-Electro-Mechanical System) technology. It provides customized products and cost effective solutions for various clients in life science and health related applications such as medical diagnostics, environmental protection, food safety and bio-medical research.

In the medical diagnostic field, MBI's Point-Of-Care (POC) diagnostic devices and microfluidic cartridges provide fast, efficient, safe, accurate, and low-cost solutions for the early diagnosis and monitoring of cardiovascular diseases and tumors. With the introduction of the innovative POC diagnostic system, mLabs

Mueller Sports Medicine, Inc. is a family-owned business started in 1961 by Curt Mueller. Curt's inside knowledge of the athletic demands placed on the body during sports helped steer him towards sports medicine and the founding of Mueller in the basement of his father's pharmacy.

Athletes worldwide have been succeeding with Mueller products since the early 1960s. Early offerings such as M-Tape®, M-Wrap®, the Medi-Kit™ trainer's kit, and Quench® Mist proved to be training room stalwarts and forerunners to what would become a new retail category. By the early 1980's, we had introduced the retail world to a unique way of marketing sports medicine products. Having raised the bar in the training room, a complete line of patented braces and supports under the Mueller Sport Care® brand brought world-class products to athletes at all levels.

Mueller remains on the cutting edge of technology and continues to offer new and innovative products and has established itself as the undisputed sports medicine leader.

About us

In the 1970's, UNIGON INDUSTRIES introduced the ANGIOSCAN, the first commercially available medical blood flow spectrum analyzer. Previously, spectral analysis had been used as a method of evaluating sound frequency, permitting reproducible scientific classification and evaluation of sound. This technology had many applications including speech analysis, underwater sound analysis, geophysics, and animal sound studies.

In the medical field, B-mode imaging was used in conjunction with Doppler to evaluate blood flow in arteries and veins. This technique had several drawbacks. The Doppler sound analysis was based on the operator's hearing and mental evaluation of the sound, making the technique extremely operator dependent. Because of this it was impossible to accurately determine the degree of stenosis. The results of studies were not scientifically reproducible. Also, no information was available about the direction of blood flow.

Dr. William Stern, one of the founders of UNIGON, worked with Dr. Robert Barnes and Dr. Stan Rittgers to develop the ANGIOSCAN. The ANGIOSCAN allowed clinicians to evaluate and numerically quantify blood flow velocity in the body, and to determine direction of flow. Spectral analysis heralded a revolution in non-invasive testing.

The ANGIOSCAN was used to develop many Doppler applications, including the first transcranial Doppler developed by Dr. Rune Aaslid. MULTIGON also pioneered the use of Umbilical Doppler Velocimetry, a non-invasive blood flow test that has become a standard in prenatal care. Today, spectral analysis is found on most ultrasound systems.

In 1983, UNIGON was acquired by ARTRA INC and later by GENERAL ELECTRIC CORP. UNIGON's original team of scientists and engineers regrouped to form MULTIGON. Today, MULTIGON continues its tradition around the globe with the NEUROVISION™ 500M. Our commitment to "Excellence in Ultrasound" remains strong.

MULTIGON is a U.S. owned company with representatives and distributors serving the medical community around the globe. All equipment is manufactured in Yonkers, New York. The NEUROVISION™ 500M TCD SOLUTION SERIES represents the culmination of years of experience, scientific research and interface

About Us

OUR BEGINNINGS

Founded in 1986 by a physician and two biomedical engineers, Neotech has proven to be a leader in the development of innovative neonatal, pediatric and respiratory products that have helped patients world wide. Neotech's speciality

is in creating skin friendly products that are ideal for neonates.

OUR EMPLOYEES

The employees at Neotech are dedicated, caring individuals that will go beyond the customer's expectations to provide complete "Customer Satisfaction", not just customer service. We are not satisfied unless our customers and their patients are satisfied! To that end, we never have back orders. This has been our corporate policy for 20 years!

PROUD TO SAY ... MADE IN USA!

Noetech is very proud to say that our products are MADE IN USA! We adopted this motto years ago and what we do is good for America, good for our local economy and good for our vendors. We know that many of our competitors have the majority of their products made overseas. This may add to the bottom line but it can also cause quality concerns, shipping delays or production problems.

We also know of some competitors that are actually encouraging and supporting manufacturers to "help broker their production overseas". What a shame that is! Our quality, avoidance of back orders and continued reliability for our products is a direct result of our MADE IN USA mission! Our products are very unique. Neotech is the owner of many U.S. and foreign patents and we continue to work on new product development to be at the forefront of neonatal and pediatric care.

LATEX, PHTHALATE/DEHP AND BPA FREE PRODUCTS

All of our products are latex free and also do not contain phthalates/DEHP or BPA.

About Us

NewTech, a professional manufacturer and marketer in medical field, is actively providing products and services to thousands of hospital users through hundreds of distributors and partners with its international headquarters located in Minnesota, U.S.A and offices in China, Canada and Hongkong.

In 2000, NewTech set up product line of ECG, Patient Monitor and Ultrasound Scanner. Since then, the products have been selling to over 60 countries and areas via local agents, distributors and business partners.

In 2004, Anaesthesia machines and Ventilators were developed and introduced to market.

In 2011, new Anaesthesia machine Solace and Ventilator Pavane series were launched. Syringe and infusion pumps were launched in the same year.

In 2012, NewTech introduced rehabilitation products including Footdrop system, compression therapy and massage chairs and foot massagers under brand name Aidus.

Starting from 2004, NewTech have been engaging in Turn-key Projects, providing not only NewTech products but also various medical products to customers in need. MediMax and DentalMax are two brands under NewTech Corporation.

About us

Nidek Medical Products, Inc. was established in 1986, following the acquisition of the oxygen concentrator division of Union Carbide. Relocated the business to Birmingham, Alabama, USA, the South's center for medical research and treatment, and resumed production. During the following years we continued the evolution of our oxygen contractor and expanded our product lines to include Aerosol and Sleep Therapy. Since inception, Nidek Medical has grown to supply over 100 countries making us one of the largest manufacturers of respiratory equipment in the world. With such accomplishments comes recognition: A Recipient of the "President's E Award" for Excellence in outstanding contributions to the increase of U.S. Trade Abroad in conjunction with the "President's Star Award" for continued Excellence in Exports. Also named as Alabama's Exporter of the Year. During decades of strong global competition, vigorous growth within the company and vast changes in the market, Nidek Medical has remained constant in our dedication to excellence and our determination to provide quality products to each and every customer around the globe. Thank you for taking this time to get to know Nidek Medical. We hope you will give us a chance to get to know you and your company.

ABOUT IIC

IIC - International Immunology Corporation is located in Southern California, U.S.A. Our facilities have been used to produce antisera for over 30 years. From operations already in place, IIC was established in 1982 and is situated on approximately 70 acres in the Murrieta Valley. Over the years, IIC has become well known in the medical diagnostic kit industry as a reliable provider of quality bulk polyclonal antisera and calibrators/controls used for further manufacture. The experience gained by IIC during the company's tenure enables us to focus on quality and value in working to meet the specific needs of our customers.

Animal welfare is a top priority at IIC and we endorse the policies as detailed in the Guide for the Care and Use of Laboratory Animals - published by the National Research Council. Our Institutional Animal Care and Use Committee (IACUC) is used to oversee and evaluate all aspects of IIC's animal care program and protocols. Before animals are introduced into the herd population, animal candidates are quarantined until testing, vaccination, tagging (electronic identification), and observational methodologies are completed. Individual health records are prepared and maintained on site. Additional to the animals brought in to our facility, IIC manages our own breeding program diminishing risk to qualified animal supply. Our internal breeding program helps contribute to the competitive solution IIC offers to our customers.

IIC has over 10,000 square feet of building space which houses the operational aspects of:

Facility maintenance Animal care Production and purification of immunogen
 High capacity production and purification of bulk goat antisera and human serum
 Quality control Packaging and shipping Administration Technical Support Sales
 and Marketing

Our centralized operation enables us to more efficiently support distributors and customers located all over the world.

IIC's commitment to quality is evident by our ISO 9001:2008 certification. Additionally, IIC is a USDA approved technical blood facility for the collection and exportation of ovine and caprine blood products to approved European Union facilities for further processing.

OUR VISION

International Immunology Corporation will be recognized as a world class partner with our customers in the global diagnostic industry as the provider of choice.

OUR MISSION

International Immunology Corporation, a leading manufacturer in the diagnostic industry, continues to supply high quality products and services at a price which will give our customers the competitive edge in a changing global market place.

About NoIR

NoIR LaserShields provide industry-defining protection and visibility with an eye on comfort and wearability. With 100+ filters and a frame to fit any face, there's a LaserShield for every user and every application. Utilizing specialized narrowband peak absorbers rather than broadband generalized dyes, LaserShields absorb specific laser lines at high Optical Densities without sacrificing visibility and delivering offers the highest CE-certified LB-ratings possible for polymer lenses

Established in 1996 as a division of NoIR Medical Technologies (1972), NoIR continues to provide the most comprehensive line of safety eyewear for coherent and non-coherent light sources, and we are able to engineer quickly custom solutions for new applications. LaserShields offer protection, visibility and style for the world of laser applications, making LaserShields the point where safety and comfort converge.

LaserShields are made in the USA and are CE-Certified for the world of laser

NORAXON About Us

Superior Evidence-Based Biomechanics

Since 1989, Noraxon U.S.A. Inc. has been a leader in manufacturing and distributing high-end tethered and wireless surface and fine-wire electromyography (EMG) instruments, software, sensors and accessories. Our technology is used by professionals monitoring the performance of athletes, researchers and clinicians specializing in muscle injury and rehabilitation, and for the study of ergonomics in the workplace and product design.

Noraxon's patent-protected instruments are designed with a unique amplifier technology that eliminates external noise and artifact to capture clean, reliable and repeatable EMG signals. Noraxon's hardware does not contain "notch-filtering", resulting in the most reliable surface EMG (SEM) instrumentations for dynamic muscle function.

Noraxon offers a full line of SEMG products, from a two channel handheld unit, data analysis and acquisition software, to an elaborate 32 channel telemetry system. A wonderful advantage of Noraxon's equipment is its capability to interface with the most popular motion measurement systems on the market as well as other commonly used measurement devices such as goniometers, foot switches, strain gauges and force plates. A recent addition to the complete line of EMG products has been an extensive array of biomechanical sensors.

Nova Biomedical

Nova features the Stat Profile® Prime family of blood gas / critical care analyzers plus StatStrip® and Stat-Sensor® handheld meters for Point-of-Care whole blood glucose, ketones, lactate, hematocrit/hemoglobin and creatinine testing. Nova also provides Nova Max Plus self-test glucose meters and strips.

About us

Oakworks® has been a leader in table and positioning device design for over 30 years. Our modern 91,000 sq ft factory, located in Pennsylvania, houses our manufacturing and engineering facilities. The health of all involved in delivering medical services is of paramount concern to us. Our approach to design reflects this with great ergonomics and anatomically correct positioning of patients leading to better outcomes and less stress and injury for care givers. Our commitment to our customers is reflected in our exceptional customer service and longer than industry average warranties. This commitment also demands that our products are rigorously tested and designed to last, both to the benefit of our customers and the environment.

OAKWORKS® has a strong commitment to environmental wellness and making products in the US. Our business model relies heavily on ensuring sustainable resources - both natural and workforce-related. We have a proactive plan that addresses both aspects of sustainability to ensure we are doing our part to preserve the health of our planet and the wellbeing of our employees.

Non-Invasive Saliva Based Technology

Oasis Diagnostics® Corporation was founded in 2002 to address a growing need for non-invasive saliva based technology for rapid testing, sample collection, and molecular diagnostics [DNA, RNA and proteins]. The Company is dedicated to meeting the need for more effective screening tools, which may be applied to the early detection of diseases and medical disorders, utilizing non-invasive test specimens, particularly oral fluids (saliva).

Oral Fluid Products

A major focus area for the company is our commitment to providing timely and superior quality diagnostic and screening solutions. Oasis Diagnostics® Corporation has developed a unique proprietary range of oral fluid products which includes the *VerOFy® oral fluid rapid test platform, the *Versi-SAL® split sample saliva / oral fluid collection device, the DNA-SAL™ Salivary DNA collection device, and Super-SAL™, a novel device for RNA and or protein collection for genomic applications or proteomics and the Sali-Chek™ hand held electronic reading device for lateral flow test reading. Additional devices are under development.

The Company is also the exclusive North American distributor for a novel genomic product line from ViennaLab Diagnostics (Vienna, Austria), which is based upon pharmacogenomics and genetic predisposition. Products include rapid strip based assays for KRAS mutations, BRAF, Fc Gamma Receptors, Congenital Adrenal Hyperplasia [CAH], hemochromatosis, Alzheimer's disease, cardiovascular disease (CVD), Familial Mediterranean Fever (FMF), Gaucher's disease, sugar (glucose / fructose) intolerance, CYP2D6, HLA-B27, cystic fibrosis and others.

Pharmacogenomic Tests

Newer pharmacogenomic tests include novel immunoassays for identification of genotypes associated with response to Coumadin anti-coagulants including Warfarin, treatment response to HIV HAART and 5-fluorouracil chemotherapy treatment response. Recently the Company announced a partnership to distribute products from Operon S.A. (Zaragoza, Spain). Products in this range include strip format genomic tests for celiac disease and AZF micro-deletions in

chromosome Y for male fertility.

Oasis Diagnostics® Corporation was founded on the philosophy that "early detection is the key to disease prevention efforts," so we are constantly searching for innovative new products and potential partners from many parts of the world, which fit into this strategic directive with the single purpose of improving the quality of healthcare for our global customers.

With this particular emphasis in mind, Oasis Diagnostics® Corporation is always open to discussing new business opportunities with potential collaborative partners, which fit into our Corporate strategy. Sali•Chek™, VerOFy®, DNA•SAL™, Versi•SAL®, 4saliva®, Super•SAL™ and Oasis Diagnostics® are trademarks of Oasis Diagnostics® Corporation. These devices are the subject of a series of US and international patent submissions and issued patents.

ONLINE Engineering inc.

ONLINE Engineering, inc. is recognized as the "World's source for Diagnostic Culture Production Equipment." For nearly 30 years we have developed advanced technology for the industry. Many of our innovations such as meniscus generation and open dish drying are now considered standard in the industry. Today, ONLINE's products span the globe and are used by virtually all major producers of prepared media. Our machines are known for accurate trouble-free dispensing, efficient controlled drying, low maintenance and an excellent return on investment.

ONLINE diagnostic culture media production equipment ranges from a single lane SOLO dispensing system to an eight-lane system producing up to 9000 filled petri dishes per hour, also capable of handling multi-cavity plates. In addition to these, we have specialized machines for contact dishes, dip slides and test tubes to meet a wide variety of production needs. Our automated plate production systems allow the use of virtually all types of agar without nozzles dripping or bubbles in the media.

OxyHeal Health Group

We are unique in that we are a vertically integrated wound care and hyperbaric medicine service company. Each member of the OxyHeal Health Group focuses on and excels at one specific aspect of the wound care and hyperbaric medicine business continuum:

OxyHeal Health Group, Inc – Provides full service management, operation, and medical team staffing of Wound Healing and Hyperbaric Medicine Centers at medical centers and physician practice group settings anywhere in the United States, and including certain locations worldwide. OHG contracts under a variety of responsibilities and profit sharing arrangements including full capitalization of hyperbaric facilities at risk reimbursement scenarios under long term exclusive full service partnerships and joint ventures. All agreements include definitive marketing and advertising service plus financial management of each medical department and operation.

OxyHeal Medical Systems, Inc. – Creates, designs, engineers, and manufactures all types and styles of both monoplace and multi-patient (multiplace) hyperbaric and diving medical systems and all their associated support systems. Additionally maintains architects and engineers to produce drawings and plans

MEDICA - Weltforum der Medizin
 COMPAMED - High tech solutions

to construct all aspects of wound and hyperbaric medical equipment in Hospitals and Health Care Centers. Finally, OMS maintains project managers, construction teams, and contract managers to undertake the actual construction of the Wound Healing and Hyperbaric Medicine Facilities for hospital and health care facilities.

OxyHeal University, Inc. – Maintains teams of Wound Healing and / or Hyperbaric Medicine physicians, nurses (CHRN), and Certified Hyperbaric Technologist (CHT) specialists that offer customized wound healing and hyperbaric medicine and physiology training and education leading to appropriate certifications and continued medical education credits. OU additionally conducts medical education seminars and outreach campaigns to further the understanding of Wound Healing and Hyperbaric Medicine. OU also invests its assets and staff to conduct hyperbaric clinical research, including cellular, animal and human trials.

OxyHeal Tunneling Group, Inc. - OTG provides experienced and certified industrial experts for the Earth-Pressure-Balance (EPB) Tunnel Boring Machine (TBM) industry. OTG services include staffing, consulting, and manufacturing TBM manlocks and transfer-under-pressure expertise for safe decompression protocols for hyperbaric interventions for inspection and repair of TBM cutter heads.

PCI Gases - Oxygen Generators

PCI is a global leader in the design and manufacture of on-site oxygen generators used by the Healthcare Industry

Based on existing technology used in its military medical oxygen generators, PCI has developed a commercial line of on-site oxygen generators, known as DOCS - Deployable Oxygen Concentration Systems

These FDA 510(k) cleared medical devices generate and deliver USP grade 93% ± 3% oxygen, utilizing a proprietary Vacuum Swing Adsorption (VSA) process.

Hospitals all over the world are realizing that on-site oxygen generation provides a highly reliable and economic solution for their oxygen requirements. Further, with the European acceptance of 93% oxygen for use in hospitals civilian as well as disaster preparedness hospitals can also consider these systems eliminating the logistical issues associated with vaporized oxygen or cylinder supply. Besides direct supply to the hospital house supply line an on-site oxygen system can be designed to include the capacity to fill cylinders to provide backup, peak and remote oxygen requirements.

MEDICA - Weltforum der Medizin
 COMPAMED - High tech solutions
 www.medica.de / www.compamed.de

Our Deployable Oxygen Concentration Systems (DOCS) are the proven oxygen generator in disaster relief applications and mobile field hospitals (MFH) - self contained, easy to operate and fully deployable system that does NOT require installation.

Oxygen enrichment of room air has proved to be valuable for people who need to work at altitudes of 4000 m and above. Mountaineers, miners, pilots, and astronomers; people in these professions attest to the irrefutable fact that high altitude affects a persons physical and mental performances and quality of sleep.

challenges. PerSys Medical markets and distributes a variety of specialized medical and emergency medical products to military, law enforcement, homeland security, EMS, and wilderness medicine agencies as well as worldwide government agencies. The company has been active in the medical field since the mid 90's, responding to a growing demand for life-saving products. Aided by our close relationship with medics, training facilities and decision makers, we were able to successfully market several life-saving innovations, which have become the standard in the US military and other leading organizations.

PerSys Medical has an active distribution of networks catering to militaries and emergency services worldwide. Our mission is to provide military and civilian caregivers with the most innovative solutions to improve the quality of care and ultimately save lives.

ADVOCATE About Us

Thank you for taking the time to visit our site and in considering us for your medical supply needs. We are confident you will find our products and service second to none. Over the last 10 years we have grown from a small diabetic supply company in the United States and Puerto Rico to a new voice in the diabetic supply and products industry, manufacturing and distributing our own line of diabetic support equipment.

Diabetic Supply Of Suncoast, Inc is proud to introduce the Advocate® Speaking Glucose Monitor, Advocate Duo® Speaking Glucose/Blood Pressure Monitor and the Advocate RediCode™ (no coding required). These meters are in addition to the other fine quality products we also sell. The Advocate®, Advocate Duo® and Advocate RediCode™ Monitors actually talk! They will greet you, tell you the room temp, tell you the code number, tell you when to apply the blood and give you the results all through an audible function. The Advocate®, Advocate Duo® and Advocate RediCode™ talking meter are three of only a few talking meters on the market with pricing well below our competitor's models. The speaker volume can be adjusted or muted completely. English and Spanish versions are available. For distributors interested in these new products and seeking a free sample call our US sales and distribution center at 888-469-3579.

Diabetic Supply Of Suncoast was founded with the fundamental goal of providing

Corporate Overview

PlexBio Co., Ltd. is a privately held biotechnology company with Asia headquarters in Taipei, Taiwan and US headquarters in South San Francisco. It was established in 2010 to provide powerful, innovative bioassay solutions for the life science and diagnostic industries by leveraging cutting-edge multiplex technologies.

The Multiplex Division focuses on developing a versatile multiplexing platform for research and IVD that delivers fast, reliable results with maximal efficiency and affordability. By combining paramagnetic barcoded polymer beads with our optical imaging system, it becomes possible to obtain sensitive, specific results for multiple analytes quickly and with low sample volumes. We're confident our powerful, robust IntelliPlex™ system will make PlexBio your preferred partner for multiplex assays.

PlexBio's Proteomics Division generates quality products for life science research using proprietary systems that are more efficient than traditional methods. PlexBio's functional recombinant protein production program is based on a proprietary high-level mammalian cell expression system that produces highly functional and cost-effective recombinant proteins for life science research.

QAL Medical OrthoAgility: Based on the Original CPM Device

True, OrthoAgility offers a full line of lightweight, durable CPM devices for upper and lower limb CPM therapy. But they are not just any line. The OrthoAgility line is the latest generation of CPM devices based on the original, global-first CPM work of Dr. Robert Salter in 1978. With OrthoAgility, QAL Medical keeps Salter's spirit of original thinking alive as we explore new ideas about CPM technology and design that deliver innovation in motion.

Upper & Lower Limb CPM: How We Help Heal

Motion's the key to faster healing and better end mobility results.

OrthoAgility's Lower Limb CPM devices are anatomically designed to help knee, hip, ankle, and toe joints (all weight heal and to get patients back to full motion as quickly as possible. Our Upper Limb CPM devices help keep joints moving to prevent contractures, help regain the range of motion and get patients back to being as active as before.

Single Source: More Complete Body Coverage

With OrthoAgility, you can tap into the most complete line of CPM devices available from a single supplier. That means more complete body coverage. That means you don't have to deal with the hassles of juggling multiple suppliers.

Made for Patients, Designed for You

OrthoAgility CPM devices are made to offer superior patient therapy; but they are also designed with unique features that make it easier, faster and less stressful for hospital staff to use them. Programming, applying devices to patients, lifting and transporting – we simplify those areas of CPM therapy that make your job more work than it has to be.

Mobilizing Health Care

Through our innovative 2net™ Platform and 2net Hub , we are operating and maintaining the infrastructure to enable a new generation of global mobile health solutions. Our open and innovative technology enables borderless connections – proven interoperability that works across Europe and North America.

Our secure and reliable sharing, transmission and cloud-based storage of sensor and medical device data enables companies to focus on their mHealth solutions and speed their products to market. By liberating biometric data, we are helping our enterprise customers provide continuous care, informed interventions and better management of at-risk populations.

2net Platform: A cloud-based, device-agnostic system that enables end-to-end connectivity with an expansive variety of medical devices and applications. Our award-winning solution allows biometric sensor data to be reliably captured and seamlessly transmitted to the cloud for integration with virtually any system, application or portal. The 2net Platform is designed for maximum security and interoperability offering a menu of plug-and-play wireless health solutions that work within a CE registered enterprise grade infrastructure. Solutions developed using this platform can be rapidly deployed and scaled so that organizations can quickly meet their remote monitoring and care management goals.

2net Hub: 2net Hub is a gateway used to access the 2net Platform's data center. It's compact plug-and-play design is comprised of a variety of short-range radios (Bluetooth®, Bluetooth® Smart, ANT+ and WiFi) that collect and securely transmit data to the cloud-based 2net Platform. The CE Registered and Continua compliant 2net Hub delivers an enhanced level of short-range radio flexibility, security and interoperability. It also serves as the corridor for machine-to-machine (M2M) medical device connectivity. This unique flexibility enables open and harmonious connectivity across an expanding list of medical devices.

Transformational Platform

- Scalable and device-agnostic by design

MEDICA - Weltforum der Medizin
 COMPAMED - High tech solutions
www.medica.de / www.compamed.de

- Supports a broad spectrum of gateway connections
- Meets rigorous safety and privacy standards
- Delivers end-to-end connectivity across the care continuum
- Enables reliable end-to-end wireless device connectivity and mobile application integration
- Full service infrastructure – 24/7 network operations center

Continuous Care

- Collects and securely transmits data from medical devices and biometric sensors
- Enables reliable and cost effective surveillance and self-monitoring
- Provides connectivity and secure infrastructure for interactive wellness programs
- Enhances data accessibility for population health management
- Increases provider reach while driving patient engagement

Informed Interventions

- Enables providers to securely monitor health readings regardless of a patient's care setting or location
- Helps providers better assess risk and respond appropriately based on biometric data

MEDICA - Weltforum der Medizin
 COMPAMED - High tech solutions
www.medica.de / www.compamed.de

- Allows health systems to accurately scale to manage their growing at-risk population

A new paradigm for sepsis screening

Introducing PliNOSa K-1600*, a novel in vitro diagnostic immunoassay test for the early identification of sepsis. PliNOSa measures inducible nitric oxide synthase (iNOS) on microvesicles, a new paradigm of disease pathology and can help physicians make more informed choices.

Until now, sepsis has always been an intractable disease that has often baffled medical researchers. Biomarkers such as procalcitonin (PCT), IL-6, lactate, and CRP have lacked the necessary specificity and sensitivity. These assays often fail to help physicians and clinicians to distinguish at-risk patient populations from those not at risk. PliNOSa helps physicians assess a patient's risk of developing sepsis as much as 48 hours before symptoms are recognizable.

Research and Diagnostic Antibodies has delivered high quality research antibodies to the life sciences and research markets since 1984. The company has 19 issued patents covering the PliNOSa test and detecting the onset of sepsis and is also developing aSeptiMab, a candidate monoclonal antibody therapeutic for the treatment of sepsis. R&D Antibodies gratefully acknowledges the contributions of the US Department of Health and Human Services, National Institutes of Health for grant funding received to enable the company to complete three peer-reviewed clinical studies for PliNOSa.

About Restorative Therapies

Restorative Therapies Guiding Principles

With Restorative Therapies, you can count on technical innovation and world-class design, productive research and clinical relationships and ongoing commitment to our customers. In this, we are supported by our guiding principles:

At Restorative Therapies we want to help you do more than you ever expected.

We're committed to delivering revolutionary electrical stimulation devices and therapies to help you stay active and stay ready. It's our mission to help you to achieve your full potential.

Provide you with the best therapies, services and support.

Restorative Therapies has more experience and data on FES powered systems than any other company.

Our philosophy is to invest strongly in research and development to develop the highest quality, most technologically advanced products to enhance your outcomes. We strive to deliver excellent customer service throughout our sales,

insurance and installation processes. Once you have a system, our experienced clinical and technical support teams are there to help keep you progressing.

Build relationships with health care professionals.

Restorative Therapies is committed to creating relationships with health care professionals who provide neurological rehabilitation. The RT300 is being adopted by leading clinics everywhere and we continually provide clinical education and training. We're dedicated to the people who can help you to achieve your goals.

Upgrade our recipients with the latest technological advancements.

You can be sure that we're listening to you and your clinicians and working on new technical innovations. Our ongoing participation in research studies is advancing the field of electrical stimulation cycling. New products and free software upgrades are a part of our commitment to you.

About us

RMS Medical Products is a leading developer and FDA compliant manufacturer of portable medical devices and supplies for infusion and respiratory applications. We are ISO 13485 certified and our products carry the "CE" mark. Primary medical markets served include emergency-care, hospital, nursing home, and homecare. Our company's visionary products include High-Flo RMS Subcutaneous Needle Sets, FREEDOM60 Syringe Infusion System, and RES-Q-VAC Suctioning System.

High-Flo RMS Subcutaneous Needle Sets are designed to provide premium performance without a premium price. They are intended to produce less pain on insertion and greater patient comfort throughout an infusion. Although they are a smaller 26 gauge size, they allow a drug flow rate comparable with the rate from a larger 24 gauge needle. They are available in 6mm, 9mm and 12mm lengths, with sets available in single, double, triple, or quad configuration.

The FREEDOM60 Syringe Infusion Pump provides a portable, high quality, self-powered, maintenance free delivery system for ambulatory, home and hospital use, delivering precise infusion rates and uniform flow profiles that provides consistent transfer of medication. The FREEDOM60 is a versatile, easy-to-use

MEDICA - Weltforum der Medizin

lightweight mechanical pump providing a cost-effective alternative to expensive electronic and disposable IV administration devices and may be used to deliver a wide range of infusion products including antibiotics, pain control, chemotherapy drugs, immune globulin, desferal, and cardiac drugs, among others.

RES-Q-VAC is currently the market leader for portable suction devices, providing a complete suction system designed to remove fluids from a patient's airway. The RES-Q-VAC consists of a hand-held manually operated suction pump, providing benefits in many markets, and is particularly effective in emergency settings. RES-Q-VAC incorporates features which eliminate the risk of contaminating healthcare providers during suctioning of a patient or afterwards during clean-up. RES-Q-VAC also is used by providers of emergency medical services, hospitals and other institutions as a backup when electrical systems fail. It enhances preparedness for natural disasters, and often is strategically placed to be readily available, such as on cardiac response carts. It is suitable for use on adult and pediatric patients.

RMS Medical Products is located in Chester, New York, and operates globally with a consistent commitment to serving healthcare professionals and their patients.

About us

SCIMEDX Corporation is a highly flexible company, with over 30 years in the medical diagnostics industry, specializing in IFA, ELISA, and automated laboratory platforms, with a focus on autoimmune diseases. The strength of the organization is the collective diversified experiences of the personnel in many areas of diagnostics and biochemistry. Our long time experience with the FDA regulations as a manufacturer of medical diagnostic kits provides

MEDICA - Weltforum der Medizin
 COMPAMED - High tech solutions
 www.medica.de / www.compamed.de

a practical approach to domestic as well as international regulatory compliance.

SCIMEDX has produced Tissue substrates slides, HEp2, FTA, Legionella, and DNA antigens for autoimmune IFA kits for over twenty-five years. Our ELISA kits utilize competitive binding and traditional sandwich techniques for unique autoimmune disease markers. Our company also develops unique assays that allow for a continuous flow of new and innovative technologies.

We believe that quality belongs to everyone. Our quality system consists of integrated processes requiring planning, commitment, actions and follow up. We are harmonized with ISO 13485:2003, CMDR and compliant with the requirements with European medical device directives (Medical Device Directive 93/42/EEC, and In Vitro Diagnostic Medical Device Directive 98/79/EEC) in order to CE Mark our products.

About us

SeraCare Life Sciences develops, manufactures, and sells a broad range of biological based materials and services essential for the manufacture of diagnostic tests, commercial bioproduction of therapeutic drugs, and additional research applications in the biotechnology, pharmaceutical, and diagnostic industries.

SeraCare's offerings include plasma-based therapeutic products, diagnostic products and reagents, cell culture products, specialty plasmas, in vitro stabilizers, and clinically annotated DNA, RNA, serum, and tissue specimens ethically collected from consenting donors with a variety of patient conditions.

SeraCare Life Sciences, Inc. has created a closed-loop delivery system for diagnostic products that is unique in this industry. This delivery system allows the company to selectively collect the human blood, manufacture the final product, and deliver the finished product to the customer in one controlled process, thereby achieving better quality control and a faster delivery of the final product to the customer with complete traceability.

male reproductive biology at the Center for Research in Contraceptive and Reproductive Health at the University of Virginia. The Company has developed SpermCheck®, point-of-care immunodiagnostic sperm tests, for testing male fertility at home that includes the following products and brands:

SpermCheck® Fertility, SpermCheck® Vasectomy and SpermCheck® Fertility Plus.

SpermCheck® Fertility and SpermCheck® Vasectomy are FDA approved and CE Mark for sale in the US and Europe. SpermCheck® Fertility Plus is a second generation product already developed that will be released in the future. Currently, SpermCheck® Fertility is sold in US retail stores including Walgreens, CVS, Rite Aid, Target and Meijer and online at www.SpermCheck.com. SpermCheck® Vasectomy is currently promoted to urologist offices and sold online at www.SpermCheck.com.

SpermCheck® products are proprietary antibody-based immunodiagnostic assays for detecting human sperm, similar in principle and format to home pregnancy tests. The family of SpermCheck® products has been developed to meet the unmet need of men who desire to assess their fertility status in the privacy and convenience of their home. SpermCheck® devices are marketed to vasectomized men and couples planning to or currently attempting to conceive.

Statcorp Medical

Statcorp, Inc. was founded in 1989, in Franklin TN. The original product was The Woods Pump®, a rapid infusion device used in the ER and trauma environment. This device was designed and engineered by an

MEDICA - Weltforum der Medizin
 COMPAMED - High tech solutions
www.medica.de / www.compamed.de

emergency room clinician who is also one of Statcorp, Inc.'s founders. To compliment that product Statcorp, Inc designed a reusable pressure infusor bag and in 1991 the Unifusor® disposable pressure infusor was introduced. In addition Statcorp, Inc. manufactures the SoftCheck® line of Disposable Blood Pressure Cuffs and UltraCheck® Reusable Blood Pressure Cuffs. Currently these products are sold direct or through distributors, primarily to the acute care hospital market. Statcorp, Inc. Products are also sold to the international markets in Europe, Canada, South America and Asia.

The name has now been registered as Statcorp Medical - a division of Spacelabs Healthcare.

Our products are used more frequently in the OR, ER, acute care, and critical care areas of larger hospitals. Our products are also used in doctor's offices, clinics, extended care facilities, and military/emergency aid applications, all over the world.

About Us

SurModics offers a broad array of advanced technologies to enable the performance and enhance the functionality of medical devices and in vitro diagnostics. For our customers, we are more than a highly reliable company. We are a collaborative strategic partner—the one they turn to for solutions that get them from concept to commercialization faster by leveraging proven experience.

On a corporate level , we improve patient lives and support customer objectives through technology innovation. That means:

Providing responsive, knowledgeable support to achieve your specific needs
 Developing process improvements that yield cost savings throughout the product life cycle
 Serving as a trusted partner to help you uphold the highest quality standards

For our medical device customers , we deliver best-in-class coating solutions, customized to meet each manufacturer’s specific needs.

We are:

Chosen by top medical device manufactures for our proven performance, quality, regulatory, and manufacturing advantages
 Known for the flexibility and speed of our solutions
 Developers of the patented PhotoLink® technology to photo-initiate a covalent bond to device substrates – the preferred approach to surface modification
 Creators of tunable drug delivery coatings and implant technologies that can be customized to meet therapeutic dosing and duration requirements

For our in vitro diagnostic customers , we provide best-in-class assay components and technologies. We offer customers:

Solutions to create new tests or achieve new functionality
 High-quality, readily available protein stabilization reagents, colorimetric and chemiluminescent substrates, recombinant autoimmune antigens, accessory reagents, and activated slides for DNA and protein microarrays
 Remarkably responsive, collaborative technical support to serve as an extension of your team

About SW Safety Solutions Inc.

Founded in 1984 as one of the world’s first single use nitrile glove manufacturers, SW Safety Solutions is now a leader in the hand protection industry. With corporate headquarters in Union City, California and five factories in China, we supply a unique portfolio of products to meet the growing hand protection needs of workers in the industrial, healthcare, and retail markets worldwide.

Our dedication to quality, innovation, and customer care are powered by a team inspired to make a difference. We go beyond protection and comfort, and deliver solutions that tackle the difficult challenges of hand health and worker productivity. SW hand health and advanced performance technologies have delivered solutions revolutionary to the single use glove markets, including the following technologies: patented Aloe Vera therapeutics, HYDREX®, pH Natural®, Mil-Tek™, and TouchTek™. Our facilities are in full compliance with cGMP and are ISO 9001, ISO 13485, and CE certified.

SW has a global perspective on protecting the environment. With over 2,000 employees worldwide, we work to combine sustainable development and profitable growth by integrating environmental, economic, and social perspectives into our business practices.

About Us

Tetracore is a biotechnology company whose mission is to create and develop innovative diagnostic assays and instruments for the detection of infectious diseases and bio-warfare agents. We focus on products and services for the clinical, veterinary, and domestic preparedness markets.

The company develops innovative detection technologies, such as the T-COR 8™ Portable real-time PCR (Polymerase Chain Reaction) machine. The T-COR 8 is a “Cloud” ready networkable machine, with 8 independent wells, 10.4” touch screen, integrated barcode scanner, weighs less than 4.5 KG, multiplex capable and is ideal for Point-of-Care settings. Tetracore offers a product line of PCR assays for sensitive and specific detection of clinical and animal diseases. Tetracore also offers a broad range of highly-specific, rapid, antibody-based test kits and antibody reagents for the detection of BW infectious agents, including the first FDA cleared test Kit for identification of B. anthracis from colonies.

The founding scientists of Tetracore have been leaders in the development of state-of-the-art detection technology for use by the Department of Defense (DOD), DHS, FBI, and DOE. These scientists bring their extensive expertise to Tetracore in order to provide their commercial and government customers with an expanded production capability, greater flexibility in the development of new

Texas Medical Center - Houston

With 190 life science and biotechnology companies, 100 cutting-edge hospitals and health clinics, and some of the United States' top research facilities located here, the Houston region is the heart of the biotech-

MEDICA - Weltforum der Medizin
 COMPAMED - High tech solutions
 www.medica.de / www.compamed.de

nology, nanotechnology and life science industries.

Houston is the birthplace of nanotechnology and is home to the largest medical complex in the world - the Texas Medical Center. Houston's Texas Medical Center provides access to internationally renowned centers of excellence in cancer research, cardio-care, pediatrics and infectious disease vaccines.

All of the institutions located at Texas Medical Center are not-for-profit, and are dedicated to the highest standards of patient care, research, and education. Either not-for-profit or government, these institutions include 21 renowned hospitals with 7 acute care, 6 pediatric care, and 8 specialty care facilities; 3 public health organizations; 2 universities; 3 medical schools; 6 nursing programs; 2 pharmacy schools; a dental school; 8 academic and research institutions; and 13 support organizations.

As the largest employer in Houston, Texas Medical Center is home to the largest concentration of medical professional and experts anywhere; one of the first, and still the largest, air ambulance service; a very successful inter-institutional transplant program; three Level 1 trauma centers; and more heart surgeries than anywhere else in the world.

In the Spring of 2014, Houston will launch Medical World Americas . Inspired and powered by world-renowned MEDICA and in collaboration with the Texas Medical Center and its institutions. As the first "World of MEDICA"™ show to launch in North America, this groundbreaking trade event is unrivaled in scale, scope and caliber in the United States. Leading practitioners, researchers, experts and educators will join in Houston, Texas and gain access to the unequalled resources and opportunities assembled only here.

It's all here, at the Texas Medical Center in Houston, Texas – and it's here for everyone.

About us

TIDI Products manufactures single-use infection prevention products for the medical, dental and foodservice markets, and a variety of poly films for converters. The materials we use to produce disposable products enhance their performance and convenience.

We're focused on understanding the needs of professional care providers and the desires of the patients they care for. Our products provide specific solutions to meet precise needs, and we offer an array of clear choices, based on key factors that matter most to the people who use them.

We're dedicated to helping distributors build their brands and market share, offering value-added support with private label packaging of selected products, as well as promotional materials. We're confident that our end-user focus assures the right product mix.

TIDI headquarters are located in the heart of the Paper Valley in Neenah, Wisconsin, with an additional distribution facility in Rialto, California. Supported by an office in Hong Kong, key sourcing locations include Asia, Europe, Latin America and Canada.

We design for safety first, then simplicity. We believe that our products need to fit well in your processes.

We're a small team – less than twenty of us, for now. We are always working to learn more about your workflow, to understand what works well and what doesn't. We are focused on blood banks, labs, and blood centers, and we create solutions to enhance safety and efficiency, for you and your patients.

The leadership team has extensive experience in healthcare and the process of developing new products based on observing customer insights. Some of us are athletes. Others, not so much. We've built a team with the right blend of skills to support you while developing new products. We appreciate your business.

We hope you'll collaborate with us on the next new thing. We look forward to working with you.

About Us

2005: Ubimed® was founded in Los Angeles by Doctor Jose Bensoussan, specializing in Ear, Nose and Throat who patented the first battery operated nasal aspirator for babies, that uses disposable nozzle pieces.

2007: Ubimed® launched in the US and Europe the Cleanoz® Nasal Aspirator for home use.

MEDICA - Weltforum der Medizin
 COMPAMED - High tech solutions
 www.medica.de / www.compamed.de

Cleanoz® is the only battery operated nasal aspirator for babies that uses disposable reservoir nozzle pieces, protecting the inside pump making Cleanoz® a sanitary solution for cleaning babies noses.

2008: Ubimed® has received the prestigious international ISO 13485 certification for its quality system.

2010: After 4 years of intensive research and development, Ubimed® introduced the LifeNest breathable sleeping system for babies (home use). This patented Sleeping system was specially designed by a Medical Doctor to prevent and treat Positional Plagiocephaly (Flat Head syndrome) and help prevent Sudden Infant Death Syndrome (SIDS).

2014: Answering to pediatricians and Neonatologist Nurses requests, Ubimed introduced the Lifenest Low pressure mattress and disposable sheets for hospital incubators, bassinets and Cribs.

2015: Ubimed is proud to introduce the revolutionary Cleanoz Pro Nasal aspirator for hospitals, totally silent using disposable reservoir tips. The 100% hygienic Cleanoz pro is intended to be used in NICUs, PICUS, Emergency rooms, ambulances and Daycare Centers/postnatal care centers.

The Beginning

UVDI is one of the oldest and most respected ultraviolet disinfection companies in the world.

It all began with the hard work and ingenuity of a single man. Three generations ago Lou Veloz was an engineer for Westinghouse when their R&D engineers developed and patented the first commercial ultraviolet lamps. Lou was excited by this new technology and in 1949 he purchased a Westinghouse UV lamp dealership. Early applications were difficult to develop, but Lou had a vision of how ultraviolet light might be widespread and effective. He formed Aquafine Corporation to focus on water disinfection.

US DEFIB MEDICAL TECHNOLOGIES LLC

US DEFIB MEDICAL TECHNOLOGIES, LLC, hereinafter referred to as "US DEFIB" has significantly contributed to the advancement of modern medical treatment with many innovative

MEDICA - Weltforum der Medizin
 COMPAMED - High tech solutions
www.medica.de / www.compamed.de

products and technologies.

The Social, economic and environmental dimensions in the modern world, the understanding of a sophisticated market, the need for fast changes, the macro economic trends, information transparency, globalization, and other factors have substantially consumed people's time, influencing and impacting the quality of life as well as physical and mental health in the world.

Such movements are evidenced by the great mortality rate of people who suffer from cardiopulmonary arrest, which causes about 300,000 deaths only in the US. Scientific studies proven by the American Heart Association, determine the use of an Automated External Defibrillator (AED), as an effective way to combat sudden death.

It was with this purpose and mission that the company US DEFIB was founded; producing high-tech defibrillators, with wide geographic range, optimizing access to early defibrillation, so that more lives can be saved.

Growth challenges, improvements in the complexity of the business environment, the choice of the best strategic alternative, the analysis and quantification of the involved risks; make up the entire management of the U.S. DEFIB.

About Us

VicTorch Meditek, Inc. established in 1999, is a San Diego, California based manufacturer of in vitro medical diagnostics that provides a wide variety of products to customers worldwide. Our product lines include rapid Gold Assays and Elisa test kits for human hormones, drugs of abuse, cancer markers and infectious diseases. This variety of products and formats allows the customer with choices to best fit their testing requirements and needs. VicTorch Meditek produces finished kits or will manufacture these tests as OEM products under contract, for our customers. Our contract manufacturing capabilities provide our OEM customers with high quality products while saving them significant operational costs.

VicTorch Meditek has a joint venture with China Tianjin Sanda Biomedical Technology Co., Ltd. This partnership utilizes a 10,000+ square foot GMP manufacturing facility in China which allows for more efficient production of some of VicTorch Meditek's products. VicTorch Meditek customers realize the benefits of this partnership with bigger profit margins.

This partnership also allows us to bring the most urgently needed tests, such as our recently released rapid Gold Assay screening test for HIV 1&2, to market more quickly. This screening test has the ability to type HIV virus from either a serum or whole blood and has passed serial control panels. It has also been

MEDICA - Weltforum der Medizin
 COMPAMED - High tech solutions
www.medica.de / www.compamed.de

sited by three clinical studies for its sensitivity and accuracy.

If you have not tried VicTorch Meditek products, we invite you to try them and experience their quality and ease of use for yourself. Quality and affordability are our commitment to our customers.

About Us

Vioguard, LLC, a Washington State based company, is passionately committed to developing products that enhance the effectiveness of infection control strategies without compromising productivity or accuracy. This is done by working with industry professionals to develop the most effective infection control solutions possible.

Vioguard LLC was established in June of 2008 by technology professionals interested in developing products to combat

Healthcare Associated Infections (HAIs), a problem plaguing hospitals around the world.

VISIONSENSE - MULTI-SPECTRAL 3DHD MIS VISUALIZATION

Visionsense develops, manufactures and markets next-generation surgical visualization solutions. Visionsense is the first company to combine ground-breaking single channel high definition 3D-HD MIS visualization technology with Infrared Multi-Spectral imaging to provide unique clinical value to surgeons.

The Company pioneered micro-stereoscopic camera technology, a proprietary technology approach to single channel 3D visualization that uniquely delivers the highest quality 3D images, lowest product profile, and greatest ease of use by the physician. Visionsense Multi-Spectral imaging technology allows surgeons to visualize blood flow through the skin and beneath tissues providing a key indicator of perfusion interpretatively. These benefits enable clinical and commercial improvements including greater department revenue in terms of faster procedure time and OR turnover, better patient safety and improved outcomes.

MEDICA - Weltforum der Medizin
 COMPAMED - High tech solutions
www.medica.de / www.compamed.de

Visionsense's flagship product is its VSiii stereoscopic visualization system. The Company's 2nd generation products include a High Definition ("HD") 3D camera system ("3D-HD") with a rigid scope set (4mm and up) and flexible ("Snake") 3D camera system. Visionsense's VSiii system can be used in minimal invasive Neuro, ENT, Arthroscopy and General surgery procedures. It has been cleared by the FDA and CE and is used clinically on a regular basis, throughout the world.

Visionsense Multi-Spectral technology is fully integrated into the VSiii platform. This technology uses an injectable dye called Indocyanine Green (ICG) to enable visualization of blood flow beneath the skin and behind tissues. Immediately after injection, ICG binds to blood proteins and circulates through the body. When ICG is illuminated with special laser, it fluoresces (glows) in the Near Infrared spectrum. The Visionsense system provides a best in class excitation light source, HD camera technology, and advanced image processing to allow the surgeon to evaluate blood perfusion in real time. The integration of 3D imaging and Multi-Spectral platforms, allow both viewing of blood flow and normal tissue with blood flow superimposed on it.

The company

Making the smart move in China

VR Medical, a US based company, was established in 2009 to provide medical device companies, and distributors, a new and more effective low-cost, high-quality manufacturing resource.

We're focused on serving the needs of medical device companies by providing a single-sourced solution for new product development, out sourcing, contract manufacturing, and secure product distribution within China.

Our team are experts in single-use devices, medical equipment (mechanical, electrical & software), and membrane technologies. The market focus is respiratory care, critical care, blood purification, and advanced Advanced Wound Care.

US and EU based project management support, for new product development and contract manufacturing, prevents the need for frequent trips to China.

Our facility is FDA registered, and ISO 13485 certified, located in Kunshan,

About Us

W.H.P.M., Inc., established in 1993, is a privately held corporation headquartered at Irwindale, California, only 15 minutes away from downtown Los Angeles. The Company is a pioneer in the research and

development of one-step rapid membrane tests. It has been designated a registered GMP facility for in vitro diagnostic medical devices by the FDA. W.H.P.M. is established upon over a decade of research in the biotechnological industry. Its scientific professional team has applied these years of R&D experience to their development of one-step membrane immunoassay tests. With the strong support of our sister company, WHPM Bioresearch Technology Co., Ltd., W.H.P.M. has continuously researched, developed, and produced high quality rapid test systems that have not only revolutionized the pharmaceutical industry, but have also set new industry standards and guidelines.

Our current product leader is a trade name recognized worldwide. In year

MEDICA - Weltforum der Medizin
 COMPAMED - High tech solutions
 www.medica.de / www.compamed.de

2001, W.H.P.M. was proudly designated a sponsor in providing high quality immunological fecal occult blood tests for a large colorectal cancer-screening program; over 20,000 people in Beijing, China took part in the study. In April 2004, the Company sponsored another colorectal cancer-screening program in Hangzhou, China, in which over 60,000 people participated. Upon completion, these two recent studies together will surpass any previous clinically related studies in the world in terms of size and scope.

Through continuing clinical development, W.H.P.M. is committed to building a portfolio of quality products. Using only the highest standards, we deliver our products to the marketplace at highly competitive and affordable prices. Our mission statement clearly identifies and sets the direction for our company: "It is our goal to continually research and develop novel tests systems to enhance the quality of life."

What Differentiates Us

W.H.P.M. offers a variety of fast-turnaround services to our customers, including: production of OEM products, customized assembly, private labeling, customized cassettes, color design pouches and color box packaging. Our background and strengths are in the field of advanced bio-technology and design/ manufacturing systems. They are available to your company to assist in rapidly producing an array of products.
